OpenC2 Target Approach

- The Language Spec will contain a list of the OpenC2 normative targets and definitions.
- For every target in OpenC2 where there is a similar STIX object, the OpenC2 target will be named the same as the STIX object.
- The Language Spec will define the target-specifiers and target-options needed for OpenC2 response use cases
- For every target-specifier in OpenC2 where there is a similar STIX object property, the OpenC2 target-specifier will be named the same as the STIX object property.
- Propose that OpenC2 TC will officially liaison with CTI TC to work together in developing these similar efforts, including, but not limited to the following.
    - JSON formats without extra referencing relationships
    - Defining common parts commonly
    - Developing a path forward to define an extension model to support STIX Cyber Observables as targets.

Consensus?
