Dave Ings: <http://www.osoa.org/jira/browse/BP-88>

Ralf Mueller: Change chapter 4.9.1 as described below:

Remove the following sentence at the end of the chapter:
WS-HumanTask Processor SHOULD always activate sub tasks on creation.

Add the following text at the end of the chapter:

For human tasks that have subtasks two different cases exist, with different implications:

1. Tasks with subtasks where an actual owner is desired

2. Tasks with subtasks where no actual owner is desired

The first case has the sub-case where a potential owner has been modeled on the primary task and subtasks have been modeled that are activated either manually or automatically. Another sub-case of the first case is the one where no potential owner has been modeled and thus nomination has to occur. In all cases there is an actual owner eventually and the primary task goes through the state transitions from Created to Ready to Reserved to InProgress, etc.

In the second case where no actual owner is desired the human task (the primary task) directly transitions from state Created to InProgress. Subtasks are always instantiated automatically.

Note: The state diagram has to be changed accordingly (add a transition from Created to InProgress
