TIBCO Software has successfully implemented the Common Security Advisory Framework Version 2.0 provider role as specified in the CSAF specification [1] in accordance with the conformance clauses specified therein and OASIS policy.

TIBCO Software has successfully used, or implemented, the following conformance targets:

- CSAF document: A security advisory text document in the format defined by this document.
- CSAF producer: A program which emits output in the CSAF format.
- CSAF modifier: A CSAF post-processor which takes a CSAF document as input and modifies the structure or values of properties. The output is a valid CSAF document.
- CSFA consumer: A program that reads and interprets a CSAF document.

TIBCO Software has become a provider, satisfying the requirements defined in the CSAF specification [1]. The provider metadata is available at: https://www.tibco.com/.well-known/csaf/provider-metadata.json
