

# TAXI 2.1 - Working Call

2019-01-08

Bret Jordan

# Current state of TAXII 2.1

- Working Draft 05 was approved as Committee Specification Draft (CSD) 02 on Dec 15th
  - During the ballot we got some good comments and suggestions that we will discuss and if approved add to WD06 after the public review period
- 1st 30-day public review period opened on Dec 21 and goes to January 21, 2019

# Proposed Schedule

- Between now and Jan 21, work on all TC suggestions and changes that came in during the ballot period
- Jan 24-28 review and process comments from the 1st Public Review
- Friday Jan 28, release Working Draft 06 and issue a ballot to approve Working Draft 06 as CSD 03 with a 2nd 15-day public review
- Review and process comments from 2nd public review

# Editorial Changes to WDO5

- Section 3.4: Match Filter Example - Change example to use actual STIX 2.0 SDOs (incident is not yet an SDO)
- Section 5: Endpoints -
  - Added missing filter options from the lists on various endpoints.
  - Added the new “more” pagination property to resources that need it.

# Changes since WDD05

- Section 2: Data Types - remove Bundle since it is no longer used in TAXII
- Section 3.4.1: Filter Fields - changed new spec\_versions option to be singular like the rest of the options. Added the following text to the description
  - “If no spec\_version parameter is provided, the server MUST return only the latest specification version that it can provide for each object matching the remainder of the request.”

# Changes since WDD05 - cont

- Section 3.6: Envelope Resource - Changed to mimic the STIX Bundle instead of embedding a STIX Bundle. This makes it so existing code does not need to change.
- Section 4.3.1: Status Resource - Change a normative statement from MAY to a MUST. Add text to allow the server to designate that it has not processed any of the objects yet.

# Changes to Discuss

- Section 2: Change the definition of Integer to be a 54-bit number  $[-(2^{53})+1, (2^{53})-1]$  to be compliant with RFC 7493.
- Section 5.7: Deleting a Version - Need to add some clarifying text on how to delete a version of an object (request from Emmanuel)

# Additional TAXII 2.1 Features

- Are there additional features or functionality that needs to go in to TAXII 2.1?
- After Working Draft 06 / CSD03 and the 2nd Public Review Period, is the TC ready to move to a Committee Specification (CS)?
