

Table Legend:

- Personas in black = In Minimal version and Original version
- Personas in green = In Original version **only**
- Personas in red = In Minimal version **only**

So, how to read this Table:

- The Minimal version of Table 1 is the “base” or starting point
- To go from the Minimal version to the Original version:
 - You must add the personas in green
 - Thus, the personas in green are only in the Original version
 - You must subtract/remove the personas in red
 - Thus, the personas in red are only in the Minimal version

The Course of Action (CoA) use case may be removed as CoA is only a stub in the STIX 2.1 spec. Hence the highlighting
