

Draft ebXML Technical Architecture Specification v2.0 Outline

Status of This Document - Draft Outline v.05 - 14 July 2005

ebSOA Technical Committee Chair: John C Hardin

ebXML Technical Architecture v2.0 Editors:

Hamid Ben Malek
Goran Zugic
Dale Castle
Vasco Drecun
David Webber
Dan Pattyn

1 - Introduction -- -- <assignment> Drecun & Webber </assignment>

- Bigger picture approach to bridge between the technical modeling community and the business analysts, along with mapping directly to the ebXML and SOA related OASIS specs.
- Define Problem Statements.
- Understanding the layers in the solution stack
- B2B messaging growth and the need for Service Oriented Architecture Frameworks
- The Internet as global SOA
- Future Scenario - Consumers participating in B2B as Agents and a semantically aligned, always-on, any-to-any transactional world.
- Interoperability and Convergence

2 - Overview <assignment>Hamid ? </assignment>

- 2.1 Summary of Contents of Document
- 2.2 Audience and Scope
- 2.3 Related Documents
- 2.4 Normative References
- 2.5 Usage of Patterns to Describe Interactions

3 - Definition of a Service Oriented Architecture

- 3.1 Multi-purpose, Re-usable, Reliable, Always-On

- 3.1.1 Distributed, Specialized Components as a Framework
- 3.1.2 Problem Statement and Goals for a Service Oriented Architecture
- 3.2 On Demand Messaging
- 3.3 Security and Identity
- 3.4 An Architecture Creates a Framework
- 3.5 A Stable Framework is an Always-On Application Fabric
- 3.6 A Fractal Network: The Smallest Looks Like the Largest
 - 3.6.1 Enterprise
 - 3.6.2 Regional
 - 3.6.3 National
 - 3.6.4 Global
- 3.7 Business Processes as Modeled Artifacts
- 3.8 Business Processes as Runtime Code
- 3.9 Patterns for Common Interactions
- 3.10 Semantic Interoperability

4 - Status of Standards <assignment> Pattyn ? </assignment>

- 4.1 Status of each standard referenced in Technical Architecture v2.0
 - 4.1.1. ebXML Message Service v3.0
 - 4.1.2. ebXML Registry Services Specification v3.0
 - 4.1.3. ebXML CPPA v2.0
 - 4.1.4. SAML v2.0
 - 4.1.5. XACML v1.0
 - 4.1.6. WS-Security
 - 4.1.7. WS-Reliability v1.1
 - 4.1.8. UDDI v2
 - 4.1.9. SPML v1.0
 - 4.1.10. DSML v2.0
 - 4.1.11. WSDM v1.0
 - 4.1.12. WS-I Basic Profile
 - 4.1.13. WS-I Basic Security Profile

5. Run-time SOA

- 5.1 Principles
- 5.2 FERA Reference Architecture
- 5.3 SOA Run-time
 - 5.3.1 Federations
 - 5.3.2 Interfaces
 - 5.3.2.1 Portal
 - 5.3.2.2 Gateway
 - 5.3.3 SOA Federation
 - 5.3.1 Federation Server
 - 5.3.1.1 Federation Manager
 - 5.3.1.2 Agent Interface Manager
 - 5.3.1.3 Federation Registry
 - 5.3.1.4 Security Provider
 - 5.3.2 Agent Framework
 - 5.3.3 Collaborative Process Flow Controller

- 5.3.4 Event Manager
- 5.3.5 Activity Manager
- 5.3.6 Decision Manager
- 5.3.7 Built-in Services
- 5.4 SOA Standards Convergence
- 5.5 SOA Design and Deployment

6 - ebXML System Overview

- 6.1 ebXML Components in a Service Oriented Architecture
- 6.2 ebXML Message Service v3.0
- 6.3 ebXML Registry Services Specification v3.0
- 6.4 ebXML CPPA v2.0

7 - OASIS SOA related specifications

- 7.1 SAML v2.0
- 7.2 XACML v1.0
- 7.3 WS-Security
- 7.4 WS-Reliability v1.1
- 7.5 UDDI v2
- 7.6 SPML v1.0
- 7.7 DSML v2.0
- 7.8 WSDM v1.0

8 - WS-I related specifications and interoperability with OASIS specs

- 8.8 WS-I Basic Profile
- 8.9 WS-I Security Basic Profile

9 - Design Time: Modeling Methodologies and Processes

- 9.1 UML, BPMN and UMM Overview - summarize and reference UN/CEFACT / BPMN docs
- 9.2 ebXML Business Operational View
- 9.3 ebXML Functional Service View
- 9.4 Round-trip Engineering

10 - SOA Functional Phases

- 10.1 Implementation Phase
- 10.2 Discovery and Retrieval Phase
- 10.3 Run Time Phase

11 - SOA Information Model

- 11.1 Entities
 - 11.1.1 Action
 - 11.1.2 Activity
 - 11.1.3 Agent
 - 11.1.4 AgentModelReference
 - 11.1.5 Application
 - 11.1.6 Argument
 - 11.1.7 Association
 - 11.1.8 Choice

- 11.1.9 ChoiceReference
- 11.1.10 Cluster
- 11.1.11 CollaborativeProcess
- 11.1.12 CollaborativeProcessFlow
- 11.1.3 CPRole
- 11.1.14 Criteria
- 11.1.5 Decision
- 11.1.6 Device
- 11.1.17 EmailAddress
- 11.1.18 Event
- 11.1.19 InformationReference
- 11.1.20 InputOutput
- 11.1.21 Matrix
- 11.1.22 Message
- 11.1.23 MessageContent
- 11.1.24 MessageRequest
- 11.1.25 Metric
- 11.1.26 Organization
- 11.1.27 PostalAddress
- 11.1.28 Protocol
- 11.1.29 Rule
- 11.1.30 RuleContent
- 11.1.31 Sequence
- 11.1.32 Stage
- 11.1.33 System
- 11.1.34 TelephoneNumber
- 11.1.35 Trigger
- 11.1.36 User
- 11.2 Collaborative Process Information Document
 - 11.2.1 SOA IM Hierarchy
 - 11.2.2 OASIS ebXML Registry Format for CPID
 - 11.2.2.1 SOA IM RIM Format
 - 11.2.2.2 CPID Creation

12 - SOA Collaboration Semantics

Table of Contents to be determined later

13 - Service Oriented Architecture Features and Functions

- 13.1 Nodes and Service Binding Ports
- 13.2 Transport (ebXML Message Service v3 0 - SOAP w/ Attachments, etc)
- 13.3 Message Reliability and Error Management (ebMS, WS-Reliability)
- 13.4 Document Engineering (UBL, SOA Information Model, SOA Collaboration Semantics,...)
- 13.5 Registry / Repository, Interface Management and Discovery (ebXML Registry / Repository v3 0)
- 13.6 Party Agreements (ebXML CPPA v2 0)
- 13.7 Multi-party Business Process Specification, Execution or Choreography
ebXML BPSS v2 0, BPML & BPEL
- 13.8 Integration Interface Metadata (WSDL and other metadata held in ebXML reg/rep)

- 13.9 Security and Identity Architecture (Dig Sig, SAML, XACML, XML Encryption)
- 13.10 Message Format and Metadata (XML, Schema, CCTS)
- 13.11 Service Management (WSDM)
- 13.12 Service Provider (SOA RM detail)
- 13.13 Service Consumer (SOA RM detail)
- 13.14 Cross-Domain Semantic Interoperability and Equivalency
- 13.15 Ontologies, Taxonomies, Dictionaries and XML Libraries
- 13.16 Content Assembly Mechanism (CAM Detail)

14 - Future Plans

- 14.1 Overview
- 14.2 Feature Set (overview)
 - 14.2.1 Federation of Registries
 - 14.2.2 Discovery and Negotiation
 - 14.2.3 Agent Framework
 - 14.2.4 Event Architecture and Messaging
- 14.3 Relationship to other specifications and standards

15 - Business scenario examples

- 15.1 Healthcare - Electronic Health Record
- 15.2 Automotive - Transportation based KANBAN for Inventory Visibility
- 15.3 Aerospace -
- 15.4 Electronics -

16 - References and materials
