Overview

Interest in open standards by the world's leading technology companies has never been stronger. There is unprecedented investment in standards-based solutions that is broadening the base of available software and improving the interoperability of applications and portability of data. Where only a few short years ago value was measured by proprietary benchmarks such as patents, value is now also measured by support for open technology.

Despite this progress, as experienced managers and developers already realise, standards carry their own particular constraints and limitations. It is in this context that **OASIS Open Standards 2006** will focus on real world issues such as implementation, integration and migration. Now in its fourth year, this event continues to provide Asia Pacific's best opportunity to hear from the world's leading IT standards experts.

Ram Kumar
Conference Chair

Who should attend?

Featuring presentations from organisations such as OASIS, LIXI, ISO and others, OASIS Open Standards 2006 is the premier conference for IT professionals trying to understand the strategic directions that open standards are taking.

Attendees would be those who:

- take a professional interest in the way XML and the standardisation process is affecting information management, web applications or electronic commerce
- have heard about technologies such as ebXML but need to know more
- wish to take an active role in the development of the standards which are profoundly changing information architectures and technology in the global environment
- are developers seeking new tools and solutions for integration with other systems.

For professionals such as developers, business analysts, team leaders and executives in relevant portfolios, this is an event not to be missed!

Call for Papers

OASIS is now inviting all those interested in open standards development, convergence and adoption to participate in this event.

We are now seeking conference and tutorial presentation proposals for OASIS Open Standards 2006 that will enable delegates to learn about the latest open industry standards.

Abstracts are wanted in, but not limited to the following topics:

- ebXML and associated standards
- e-Government applications at all levels of government (federal, state and local)
- standards relating to security such as PKI and SAML
- Web Services
- localisation initiatives such as XLIFF
- vertical industry standards such as TAXXML, LIXI, LegalXML implementations, etc
- successful case studies on open standards-based integration and interoperability.

There is also the opportunity for industry-specific but non-OASIS standardisation projects to be involved with this event. Representatives of interested groups should email general-info@open-standards.com to discuss.

Got other ideas or suggestions?

Drop us a line and tell us if you have something that falls outside these categories – manager@open-standards.com

How to participate

Immediately preceding the conference is a day of classroom-style tutorials aimed at teaching specific skills or methodologies. We are now accepting submissions for this tutorial day.

Please refer to the Speaker section on the event website for more information on how to present a conference session or deliver a tutorial at OASIS Open Standards 2006.

Related activities

Exhibition

The conference is a concentrated event and an effective promotions vehicle for marketing to those who truly make decisions and understand the technology.

Sponsorship

Sponsorship of the OASIS Open Standards conference is an excellent way to reach the most informed and well-qualified representatives of the e-Business community. A range of sponsorship packages is offered to maximise exposure during the conference and throughout our extensive marketing campaign.
