Study Group 16 would like to inform you that we recently completed work on a new revision of ITU-T Recommendation H.323 that includes procedures for transporting Common Alerting Protocol (CAP) messages within H.323 systems and networks. Support for the transport of CAP messages is based on ITU-T Recommendation X.1303 and support for both text (XML) and binary (ASN.1 Packed Encoding Rules, PER) encodings are supported.

For your convenience, attached hereto is a draft copy of the revised Recommendation H.323.
