Dear Mr. Chambers:

Fax cc: 704 424 2999

Thank you again for your interest in Western Illinois's proposal to demonstrate the new Electronic-Notarization Markup standard. I was concerned about the web server on which you would demonstrate it. I believe our University will be able to expose the work that we do for you and host the application indefinitely. Since I sent you the proposal, I spoke to Mr. Fred Seaton of our University Technology department. He said they have the capability to put a pass through the firewall so that the implementation that we do on our Computer Science Departmental programming computer, toolman.wiu.edu, will be available.

However, we should probably look into hosting the application on another server, as a backup plan, just in case. (Also, you may prefer a URL other than one starting <http://www.wiu.edu/>)

I look forward to working with you as we finalize the contract and begin the work. As I write this letter, Mr. Yeluri is testing the cryptography capabilities in Java so we can have the first phase for you very quickly after OASIS approves the contract.

Sincerely yours,

A handwritten signature in cursive script that reads "Laurence L. Leff".

Laurence L. Leff, Ph.D.  
Associate Professor of Computer Science
