

Track-and-trace standard for trade and ESG data compliance

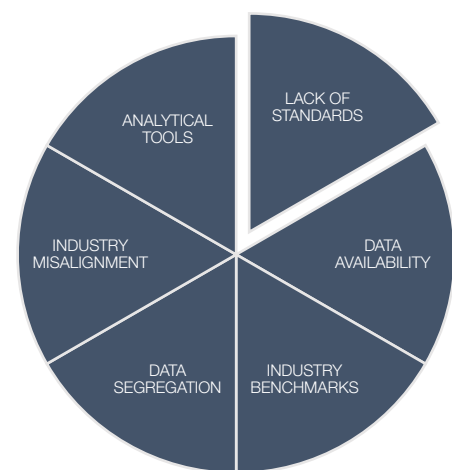

Recycled Commodities Framework

ReCoF: a by-industry-for-industry solution that provides a quantifiable, consistent data standard to help our members integrate sustainability into their reporting processes so they can better meet regulatory and disclosure demands.

Industries in need of a solution

The \$1 Trillion* Recycled Commodities Market lacks a data reporting standard for ESG and trade compliance

Top ESG data challenges for recycled materials

- Regulations like the EU Critical Raw Materials Act and Scope 3 make reporting and data compliance mandatory.
- Yet, there is no internationally recognized, standard authentication process to verify the origin of recycled commodities and track their use through the supply chain.
- Meaning, businesses can't accurately account for the environmental impact of recycled materials in their ESG reporting.
- And, suppliers of recycled materials are challenged to maximize value and navigate a fragmented market.

ReCoF provides a global data standard for provenance tracking through the supply chain. It will not replace or compete with current ESG technical specification standards.

- Standardized Data Formats
- Interoperability
- Identification and Tagging
- Transparency and Auditability
- Scalability
- Security and Privacy
- User Interface
- Real-Time Monitoring and Notifications
- Documentation and Compliance
