RE: Testing Table Insertion in ODF

From the University of Illinois
To All Interested In Document Compatibility:

This document will test the headers and footers in an ODF document and formatting within them. The text will explain what is being done with the headers and footers, but beyond that will serve to only extend the document, so that more headers and footers can be tested. The first page will be basic formatting in both the header and the footer. The second page will be more normal header and footer content, like document title, and page numbers, using the left page/right page features of OpenOffice. The third page should repeat the first and the fourth the second. This text will repeat.
