

--CONFIDENTIAL DRAFT--

Europeans Explore Security Challenges and Solutions at OASIS Open Standards Forum

Event to Feature Special Workshop on SOA and Telecommunications

London, England; xx August 2008-- “Security Challenges for the Information Society” will be the focus of the fifth annual OASIS Forum, to be held at Ditton Manor near London, 1-3 October. The event offers a unique opportunity for delegates from the international community to explore security issues including data privacy, identity management, cross border/organizational trust, outsourcing, application integration, and internationalization challenges.

“Global businesses that have embraced a distributed approach for their applications, workforce members, and vertical industry value chains have a growing need for federation and other identity management standards. Current economic conditions demand more administrative and user efficiency, as well as improved end user experiences,” said Gerry Gebel, Vice President and Service Director, Burton Group Identity and Privacy Strategies. Gebel will provide a keynote address at the OASIS Forum.

“Security today isn't just a matter of countering threats with technology. Security is about doing business in totally new ways that take into account the emerging dangers in our world and the real concerns people have,” added John Sabo of CA, member of the OASIS IDtrust Member Section, which sponsors the event. “Open standards and interoperability are key to success in today's global information society.”

The OASIS Adoption Forum will feature sessions on identity authentication, access control, digital signature processing, encryption, and key management. Keynote speakers include Edin Bektesevic of Vodafone, Giles Hogben of the European Network and Information Security Agency (ENISA), Mark Ferrar of UK's National Health System, and Paul Wright of the City of London Police. A closing panel of experts will offer predictions for the future of federated technologies.

SOA for Telecom Workshop

A special workshop on adopting SOA for telecommunications will be held in conjunction with the Forum on 30 September. Hosted by the OASIS Telecom Member Section, the workshop will examine achievements in implementing SOA for telecommunications and identify areas where improvements are needed. Featured speakers include representatives of BT and Telecom Italia.

Attendance at the OASIS Security Forum and the SOA Telecom Workshop is open to all; however, space is limited to ensure productive discussions. The event is supported by CEN/ISSS, eema, Identity Commons, IT Pro, Liberty Alliance, The Open Group, WSI-I and W3C.

The OASIS Security Forum is sponsored by Microsoft, Alcatel-Lucent, Axiomatics, CA, IBM, Nortel, Oracle, Primeton, and Sun Microsystems.

About OASIS:

OASIS (Organization for the Advancement of Structured Information Standards) drives the development, convergence, and adoption of open standards for the global information society. A not-for-profit consortium, OASIS advances standards for SOA, security, Web services, documents, e-commerce, government and law, localisation, supply chains, XML processing, and other areas of need identified by its members. OASIS open standards offer the potential to lower cost, stimulate innovation, grow global markets, and protect the right of free choice of technology. The consortium has more than 5,000 participants representing over 600 organizations and individual members in 100 countries.
