Abstract:

This specification describes a domain-specific policy assertion for WS-ReliableMessaging [WS-RM] that that can be specified within a policy alternative as defined in WS-Policy Framework [WS-Policy].

By using the XML [XML], SOAP [SOAP 1.1], [SOAP 1.2] and WSDL [WSDL 1.1] extensibility models, the WS* specifications are designed to be composed with each other to provide a rich Web services environment. This by itself does not provide a negotiation solution for Web services. This is a building block that is used in conjunction with other Web service and application-specific protocols to accommodate a wide variety of policy exchange models.

Status:

This document was last revised or approved by the WS-RX on the above date. The level of approval is also listed above. Check the current location noted above for possible later revisions of this document. This document is updated periodically on no particular schedule. Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "Send A Comment" button on the Technical Committee's web page at <http://www.oasis-open.org/committees/ws-rx>. For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (<http://www.oasis-open.org/committees/ws-rx/ipr.php>). The non-normative errata page for this specification is located at <http://www.oasis-open.org/committees/ws-rx>.

1 Introduction

This specification defines a domain-specific policy assertion for reliable messaging for use with WS-Policy and WS-ReliableMessaging.

1.1 Goals and Requirements

1.1.1 Requirements

1.2 Notational Conventions

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [KEYWORDS].

This specification uses the following syntax to define normative outlines for messages:

- The syntax appears as an XML instance, but values in italics indicate data types instead of values.
- Characters are appended to elements and attributes to indicate cardinality:
 - "?" (0 or 1)
 - "*" (0 or more)
 - "+" (1 or more)
- The character "|" is used to indicate a choice between alternatives.
- The characters "[" and "]" are used to indicate that contained items are to be treated as a group with respect to cardinality or choice.
- An ellipsis (i.e. "...") indicates a point of extensibility that allows other child, or attribute, content. Additional children and/or attributes MAY be added at the indicated extension points but MUST NOT contradict the semantics of the parent and/or owner, respectively. If an extension is not recognized it SHOULD be ignored.
- XML namespace prefixes (See Section 1.3) are used to indicate the namespace of the element being defined.

Elements and Attributes defined by this specification are referred to in the text of this document using XPath 1.0 [XPATH 1.0] expressions. Extensibility points are referred to using an extended version of this syntax:

- An element extensibility point is referred to using {any} in place of the element name. This indicates that any element name can be used, from any namespace other than the wsrn: namespace.
- An attribute extensibility point is referred to using @{any} in place of the attribute name. This indicates that any attribute name can be used, from any namespace other than the wsrn: namespace.

1.3 Namespace

The XML namespace [XML-ns] URI that MUST be used by implementations of this specification is:

<http://docs.oasis-open.org/ws-rx/wsrmp/200702698>

Dereferencing the above URI will produce the Resource Directory Description Language [RDDL 2.0] document that describes this namespace.

Table 1 lists the XML namespaces that are used in this specification. The choice of any namespace prefix is arbitrary and not semantically significant.

Table 1

Prefix	Namespace	Specification
wsdl	http://schemas.xmlsoap.org/wsdl/	[WSDL 1.1]
wsp	http://schemas.xmlsoap.org/ws/2004/09/policy	[WS-Policy]
wsrmp	http://docs.oasis-open.org/ws-rx/wsrmp/200702	This specification.
wsu	http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd	WS-Security-Utility Schema

1.4 Compliance

An implementation is not compliant with this specification if it fails to satisfy one or more of the MUST or REQUIRED level requirements defined herein. A SOAP Node MUST NOT use the XML namespace identifier for this specification (listed in Section 1.3) within SOAP Envelopes unless it is compliant with this specification.

Normative text within this specification takes precedence over normative outlines, which in turn take precedence over the XML Schema [XML-Schema Part1, XML-Schema Part2] descriptions.

2 RM Policy Assertions

WS-Policy Framework and WS-Policy Attachment [WS-PolicyAttachment] collectively define a framework, model and grammar for expressing the requirements, and general characteristics of entities in an XML Web services-based system. To enable an RM Destination and an RM Source to describe their requirements for a given Sequence, this specification defines a single RM policy assertion that leverages the WS-Policy framework.

2.1 Assertion Model

The RM policy assertion indicates that the RM Source and RM Destination MUST use WS-ReliableMessaging to ensure reliable delivery of messages. Specifically, the WS-ReliableMessaging protocol determines invariants maintained by the reliable messaging endpoints and the directives used to track and manage the delivery of a Sequence of messages.

2.2 Normative Outline

The normative outline for the RM assertion is:

```
<wsrmp:RMAssertion [wsp:Optional="true"]? ... >
  <wsp:Policy>
    [ <wsrmp:SequenceSTR/> |
      <wsrmp:SequenceTransportSecurity/> ] ?
    <wsrmp:DeliveryAssurance>
      <wsp:Policy>
        [ <wsrmp:ExactlyOnce/> |
          <wsrmp:AtLeastOnce/> |
          <wsrmp:AtMostOnce/> ]
        <wsrmp:InOrder/> ?
      </wsp:Policy>
    </wsrmp:DeliveryAssurance> ?
  </wsp:Policy>
  ...
</wsrmp:RMAssertion>
```

The following describes the content model of the RMAssertion element, additional, normative constraints on the outline listed above:

/wsrmp:RMAssertion

A policy assertion that specifies that WS-ReliableMessaging protocol MUST be used when sending messages.

/wsrmp:RMAssertion/@wsp:Optional="true"

Per WS-Policy, this is compact notation for two policy alternatives, one with and one without the assertion. The intuition is that the behavior indicated by the assertion is optional, or in this case, that WS-ReliableMessaging MAY be used.

/wsrmp:RMAssertion/wsp:Policy

This required element allows for the inclusion of nested policy assertions.

/wsrmp:RMAssertion/wsp:Policy/wsrmp:SequenceSTR

When present, this assertion defines the requirement that an RM Sequence MUST be bound to an explicit token that is referenced from a wsse:SecurityTokenReference in the CreateSequence message. See section 2.5.1.

149 /wsrmp:RMAssertion/wsp:Policy/wsrmp:SequenceTransportSecurity
 150 When present, this assertion defines the requirement that an RM Sequence MUST be bound to
 151 the session(s) of the underlying transport-level protocol used to carry the CreateSequence and
 152 CreateSequenceResponse message. See section 2.5.2.

153 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance
 154 This expression, which may be omitted, describes the message delivery quality of service
 155 between the RM and application layer. When used by an RM Destination it expresses the delivery
 156 assurance in effect between the RM Destination and its corresponding application destination,
 157 and it also indicates requirements on any RM Source that transmits messages to this RM
 158 destination. Conversely when used by an RM Source it expresses the delivery assurance in effect
 159 between the RM Source and its corresponding application source, as well as indicating
 160 requirements on any RM Destination that receives messages from this RM Source. In either case
 161 the delivery assurance does not affect the messages transmitted on the wire. Absence of this
 162 expression from a wsrmp:RMAssertion policy assertion simply means that the endpoint has
 163 chosen not to advertise its delivery assurance characteristics.
 164 Note that when there are multiple policy alternatives the of the RM Assertion, the Delivery
 165 Assurance on each MUST NOT conflict.

166 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance/wsp:Policy
 167 This required element identifies additional requirements for the use of the
 168 wsrmp:DeliveryAssurance.

169 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance/wsp:Policy/wsrmp:ExactlyOnce
 170 This expresses the ExactlyOnce Delivery Assurance defined in [].

171 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance/wsp:Policy/wsrmp:AtLeastOnce
 172 This expresses the AtLeastOnce Delivery Assurance defined in [].

173 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance/wsp:Policy/wsrmp:AtMostOnce
 174 This expresses the AtMostOnce Delivery Assurance defined in [].

175 /wsrmp:RMAssertion/wsp:Policy/wsrmp:DeliveryAssurance/wsp:Policy/wsrmp:InOrder
 176 This expresses the InOrder Delivery Assurance defined in [].

177 /wsrmp:RMAssertion/{any}
 178 This is an extensibility mechanism to allow different (extensible) types of information, based on a
 179 schema, to be passed.

180 /wsrmp:RMAssertion/@{any}
 181 This is an extensibility mechanism to allow different (extensible) types of information, based on a
 182 schema, to be passed.

183 **2.3 Assertion Attachment**

184 The RM policy assertion is allowed to have the following Policy Subjects [WS-PolicyAttachment]:

- 185 ● Endpoint Policy Subject
- 186 ● Message Policy Subject

187 WS-PolicyAttachment defines a set of WSDL/1.1 policy attachment points for each of the above Policy
188 Subjects. Since an RM policy assertion specifies a concrete behavior, it MUST NOT be attached to the
189 abstract WSDL policy attachment points.

190 The following is the list of WSDL/1.1 elements whose scope contains the Policy Subjects allowed for an
191 RM policy assertion but which MUST NOT have RM policy assertions attached:

- 192 • wsdl:message
- 193 • wsdl:portType/wsdl:operation/wsdl:input
- 194 • wsdl:portType/wsdl:operation/wsdl:output
- 195 • wsdl:portType/wsdl:operation/wsdl:fault
- 196 • wsdl:portType

197 The following is the list of WSDL/1.1 elements whose scope contains the Policy Subjects allowed for an
198 RM policy assertion and which MAY have RM policy assertions attached:

- 199 • wsdl:port
- 200 • wsdl:binding
- 201 • wsdl:binding/wsdl:operation/wsdl:input
- 202 • wsdl:binding/wsdl:operation/wsdl:output
- 203 • wsdl:binding/wsdl:operation/wsdl:fault

204 If an RM policy assertion is attached to any of:

- 205 • wsdl:binding/wsdl:operation/wsdl:input
- 206 • wsdl:binding/wsdl:operation/wsdl:output
- 207 • wsdl:binding/wsdl:operation/wsdl:fault

208 then an RM policy assertion, specifying wsp:Optional=true MUST be attached to the corresponding
209 wsdl:binding or wsdl:port, indicating that the endpoint supports WS-RM. Any messages, regardless of
210 whether they have an attached Message Policy Subject RM policy assertion, MAY be sent to that endpoint
211 using WS-RM. Additionally, the receiving endpoint MUST NOT reject any message belonging to a
212 Sequence, simply because there was no Message Policy Subject RM policy assertion attached to that
213 message. There might be certain RM implementations that are incapable of applying RM Quality of
214 Service (QoS) semantics on a per-message basis. In order to ensure the broadest interoperability,
215 when an endpoint decorates its WSDL with RM policy assertions using Message Policy Subject, it MUST
216 also be prepared to accept that all messages sent to that endpoint might be sent within the context of an
217 RM Sequence, regardless of whether the corresponding wsdl:input, wsdl:output or wsdl:fault had an
218 attached RM policy assertion.

219 Rather than turn away messages that were unnecessarily sent with RM semantics, the receiving endpoint
220 described by the WSDL MUST accept these messages.

221 By attaching an RM policy assertion that specifies wsp:Optional="true" to the corresponding endpoint that
222 has attached RM policy assertions at the Message Policy Subject level, the endpoint is describing the
223 above constraint in policy.

224 In the case where an optional RM Assertion applies to an output message, there is no requirement on the
225 client to support an RM Destination implementation

2.4 Assertion Example

Table 2 lists an example use of the RM policy assertion.

Table 2: Example policy with RM policy assertion

```
(01)<wsdl:definitions
(02)   targetNamespace="example.com"
(03)   xmlns:tns="example.com"
(04)   xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/"
(05)   xmlns:wsp="http://schemas.xmlsoap.org/ws/2004/09/policy"
(06)   xmlns:wsrmp="http://docs.oasis-open.org/ws-rx/wsrmp/200702608"
(07)   xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-
wss-wssecurity-utility-1.0.xsd">
(08)
(09) <wsp:UsingPolicy wsdl:required="true" />
(10)
(11) <wsp:Policy wsu:Id="MyPolicy" >
(12)   <wsrmp:RMAssertion/ >
(13)   <wsp:Policy/ >
(14)   </wsrmp:RMAssertion/ >
(15)   <!-- omitted assertions -->
(16) </wsp:Policy/ >
(17)
(18) <!-- omitted elements -->
(19) <wsp:PolicyReference URI="#MyPolicy" />
(20) <wsdl:binding name="MyBinding" type="tns:MyPortType" <!-- omitted
elements -->
(21) <wsp:PolicyReference URI="#MyPolicy" />
(22) <!-- omitted elements -->
(23) </wsdl:binding/ >
(24)
(25)</wsdl:definitions>
```

Line (09) in Table 2 indicates that WS-Policy is in use as a required extension.

Lines (11-16) are a policy expression that includes a RM policy assertion (lines 12-14) are a policy expression that includes a RM policy assertion (Line 12) to indicate that WS-ReliableMessaging must be used.

Lines (20-23) are a WSDL binding. Line (21) indicates that the policy in lines (11-16) are a WSDL binding. Line (19) indicates that the policy in Lines (11-14) applies to this binding, specifically indicating that WS-ReliableMessaging must be used over all the messages in the binding.

2.5 Sequence Security Policy

WS-SecurityPolicy [SecurityPolicy] provides a framework and grammar for expressing the security requirements and characteristics of entities in a XML web services based system. The following assertions MAY be used in conjunction with WS-SecurityPolicy to express additional security requirements particular to RM Sequences.

2.5.1 RM Assertion with Sequence STR Assertion

This version of the RM assertion includes the requirement that an RM Sequence MUST be bound to an explicit token that is referenced from a wsse:SecurityTokenReference in the CreateSequence message.

274 This assertion MUST apply to [Endpoint Policy Subject]. ~~The normative outline for this form of the~~
275 ~~Sequence STR Assertion is:~~ ~~is-assertion MUST NOT be used for an endpoint that does not also use the~~
276 ~~RM-assertion:~~

```
277 <wsrmp:RMAssertion [wsp:Optional="true"]? ...>  
278 <wsp:Policy>  
279 <wsrmp:SequenceSTR/>  
280 </wsp:Policy>  
281 </wsrmp:RMAssertion>
```

282 ~~The following describes the content model of the SequenceSTR element.~~

283 ~~The normative outline for the Sequence STR Assertion is:~~

```
284 <wsrmp:SequenceSTR [wsp:Optional="true"]? ... />
```

285 /wsrmp:SequenceSTR

286 A policy assertion that specifies security requirements which MUST be used with an RM Sequence that
287 are particular to WS-RM and beyond what can be expressed in WS-SecurityPolicy.

288 **2.5.2 RM Assertion with Sequence Transport Security Assertion**

289 ~~This version of the RM assertion includes the requirement that an RM Sequence MUST be bound to the~~
290 ~~session(s) of the underlying transport-level security protocol (e.g. SSL/TLS) used to carry the~~
291 ~~CreateSequence and CreateSequenceResponse messages.~~

292 ~~This assertion MUST apply to [Endpoint Policy Subject]. This assertion is effectively meaningless unless it~~
293 ~~occurs in conjunction with the sp:TransportBinding assertion that requires the use of some transport-~~
294 ~~level security mechanism (e.g. sp:HttpsToken).~~

295 ~~The normative outline for this form of the RM Assertion with the Sequence Transport Security Assertion is:~~

```
296 <wsp:Policy>  
297 <wsp:>ExactlyOne</wsp:>  
298 <wsp:All>  
299 <wsrm:RMAssertion [wsp:Optional="true"]> ...</wsrm:RMAssertion>  
300 <wsp:Policy>  
301 <wsrmp:SequenceTransportSecurity/>  
302 </wsp:Policy>  
303 </wsrm:RMAssertion>  
304 <sp:TransportBinding ...>  
305 ...  
306 </sp:TransportBinding>  
307 </wsp:All>  
308 <wsp:>ExactlyOne</wsp:>  
309 </wsp:Policy>
```

310 ~~The following describes the content model of the SequenceTransportSecurity element.~~

311 ~~/wsrm:SequenceSTR /@wsp:Optional="true"~~

312 ~~Per WS-Policy, this is compact notation for two policy alternatives, one with and one without the assertion.~~
313 ~~The intuition is that the behavior indicated by the assertion is optional, or in this case, that the RM~~
314 ~~Sequence-binding to a specific token MAY be used.~~

315 **1.1.1 Sequence Transport Security Assertion**

316 ~~This assertion defines the requirement that an RM Sequence MUST be bound to the session(s) of the~~
317 ~~underlying transport-level security protocol (e.g. SSL/TLS) used to carry the CreateSequence and~~
318 ~~CreateSequenceResponse messages.~~

319 ~~This assertion MUST apply to [Endpoint Policy Subject]. This assertion is effectively meaningless unless it~~
320 ~~occurs in conjunction with the RMAssertion and a sp:TransportBinding assertion that requires the~~
321 ~~use of some transport-level security mechanism (e.g. sp:HttpsToken).~~

322 ~~The normative outline for the Sequence Transport Security Assertion is:~~

323 ~~<wsrmp:SequenceTransportSecurity {wsp:Optional="true"}? ... />~~

324 /wsrmp:SequenceTransportSecurity

325 A policy assertion that specifies that any Sequences targeted to the indicated endpoint MUST be bound to
326 the underlying session(s) of the transport-level security used to carry messages related to the Sequence.

327 This form of the RM Assertion says that an endpoint MAY have RM as an option but always requires
328 HTTPS to be used. All the SequenceTransportSecurity assertion indicates is that RM's rules for protecting
329 the Sequence over TLS are followed.

330 ~~/wsrmp:SequenceTransportSecurity /@wsp:Optional="true"~~

331 ~~Per WS-Policy, this is compact notation for two policy alternatives, one with and one without the assertion.~~

332 ~~The meaning is that the behavior indicated by the assertion is optional, or in this case, that the binding of~~

333 ~~RM Sequences to transport-level security sessions MAY be used.~~

3 Security Considerations

It is strongly RECOMMENDED that policies and assertions be signed to prevent tampering.

It is RECOMMENDED that policies SHOULD NOT be accepted unless they are signed and have an associated security token to specify the signer has proper claims for the given policy. That is, a relying party shouldn't rely on a policy unless the policy is signed and presented with sufficient claims to pass the relying parties acceptance criteria.

It should be noted that the mechanisms described in this document could be secured as part of a SOAP message using WS-Security [\[WS-Security\]](#) or embedded within other objects using object-specific security mechanisms.

560 Appendix C. Revision History

Revision	Date	By Whom	What
wd-01.doc	2005-07-06	Ümit Yalçinalp	Initial version created based on submission by the authors.
1.0-wd-01.swx	2005-09-01	Ümit Yalçinalp	Reformatted using Open Office
1.1-wd-01.swx	2005-09-18	Ümit Yalçinalp	Applied resolution i001 Applied resolution i015/16 (doc identifier) Partial application of i017, final yyyy/mm required, changed doc URI to TBD pending yyyy/mm Deleted original copyright section
1.1-wd-01.swx	2005-10-02	Anish Karmarkar	Applied resolution of i013 + minor editorial changes + fixed resolution of i017
1.1-wd-01.swx	2005-10-04	Ümit Yalçinalp	Applied actual value for yyyy/mm. Added resolution of i009
1.1-wd-01.swx	2005-10-06	Ümit Yalçinalp	Editorial fixes suggested by Anish Updated wd draft date to October 6th
1.1-wd-01.swx	2005-10-19	Ümit Yalçinalp	Editorial change to remove .swx suffix from doc id
wd-02	2005-11-03	Gilbert Pilz	Start wd-02 by changing title page from cd-01.
wd-02	2005-11-30	Gilbert Pilz	i072 – editorial nits
wd-02	2005-11-30	Gilbert Pilz	i074 - Use of [tcShortName] in artifact locations namespaces, etc
wd-02	2005-12-01	Gilbert Pilz	Updated fix to i074 to remove trailing '/' from wsrmp namespace.
wd-02	2005-12-01	Anish Karmarkar	Applied resolution for i022
wd-02	2005-12-01	Anish Karmarkar	Applied resolution for i024
wd-02	2005-12-01	Anish Karmarkar	Applied resolution for i054
wd-02	2005-12-01	Anish Karmarkar	Applied resolution of i073
wd-2	2005-12-05	Anish Karmarkar	Applied resolution of i055
wd-2	2005-12-05	Ümit Yalçinalp	Changed fixed date in footer to current date
wd-3	2005-12-21	Doug Davis	Added i050
wd-3	2005-12-23	Ümit Yalçinalp	i057 resolution

Revision	Date	By Whom	What
wd-3	2005-12-23	Ümit Yalçınalp	Changed the ref to WS-RM to the WS-RX committee draft instead of original version Fixed Dug's email address
wd-3	2005-12-23	Ümit Yalçınalp	I060 resolution
wd-03	2005-12-27	Gilbert Pilz	Remove schema example and put it in its own artifact (wsrmp-1.1-schema-200510.xsd). Convert source file to OpenDocument format. Make line numbers all the same style.
wd-03	2005-12-28	Anish Karmarkar	Included a section link to c:\temp\wsrmp-1.1-schema-200510.xsd
wd-03	2006-01-04	Gilbert Pilz	Fixed formatting of included section.
wd-03	2006-01-05	Gilbert Pilz	Fix closing tag of normative outline for RMAssertion.
wd-04	2006-11-11	Doug Davis	Minor tweaks/typos
wd-05	2006-01-23	Gilbert Pilz	Start wd-05 by accepting all changes from wd-04
wd-06	2006-01-23	Doug Davis	Minor typos found by Marc
wd-06	2006-02-14	Doug Davis	Issue 075 resolution
wd-06	2006-02-14	Doug Davis	Issues 086, 087 resolutions
wd-06	2006-02-15	Gilbert Pilz	Issue 088: added link for namespace URI; added text describing link; added non-normative reference for RDDL 2.0
wd-06	2006-02-17	Anish Karmarkar	Removed a sentence in section 2.1 that talked about RM assertion parameters, as there aren't any.
wd-06	2006-02-17	Anish Karmarkar	Change the namespace to 200602.
wd-07	2006-02-22	Doug Davis	Accept all changes to create new WD Minor typo fixed – thanks to Paul Cotton
wd-07	2006-02-23	Doug Davis	Added missing namespace table entries - MarcG
wd-07	2006-03-08	Doug Davis	Issue 097 applied
wd-08	2006-04-11	Doug Davis	Issue 021 applied
wd-08	2006-04-24	Gilbert Pilz	Misc cleanups prior to publishing to TC.
wd-09	2006-05-29	Gilbert Pilz	Issue 117 applied
wd-10	2006-06-05	Gilbert Pilz	Accept all changes; bump WD number
wd-10	2006-06-07	Doug Davis	Applied lots of minor edits from Marc Goodner
wd-10	2006-06-13	Doug Davis	Applied a couple of minor edits

Revision	Date	By Whom	What
wd-10	2006-07-21	Doug Davis	Issues 122-124 applied
wd-10	2006-07-27	Doug Davis	Copied list of TC members from RM spec (i134)
wd-10	2006-08-04	Doug Davis	Updated old namespaces – found by PaulC
wd-10	2006-08-04	Doug Davis	Verify all [refs]
wd-10	2006-08-04	Doug Davis	Change namespace to 2006/08
cd-04	2006-08-11	Doug Davis	Issue 158 applied
cd-04	2006-08-16	Gilbert Pilz	Fix date at 08/11/2006; formatting changes for better HTML rendering.
wd-11	2006-10-25	Doug Davis	Accept all changes, update to wd11
wd-11	2006-10-26	Doug Davis	PR004 applied
wd-11	2007-01-26	Doug Davis	PR037 applied
wd-12	2007-01-31	Doug Davis	Lots of typos from MarcG Updated WD number and date
wd-12	2007-02-01	Doug Davis	PR035 (009,020 dups) applied
Revision	Date	By Whom	What
