15 **Abstract:**

16 This specification (WS-ReliableMessaging) describes a protocol that allows messages to be delivered
17 reliably between distributed applications in the presence of software component, system, or network
18 failures. The protocol is described in this specification in a transport-independent manner allowing it to be
19 implemented using different network technologies. To support interoperable Web services, a SOAP
20 binding is defined within this specification.

21 The protocol defined in this specification depends upon other Web services specifications for the
22 identification of service endpoint addresses and policies. How these are identified and retrieved are
23 detailed within those specifications and are out of scope for this document.

24 By using the XML [[XML](#)], SOAP [[SOAP 1.1](#)], [[SOAP 1.2](#)] and WSDL [[WSDL 1.1](#)] extensibility model,
25 SOAP-based and WSDL-based specifications are designed to be composed with each other to define a
26 rich Web services environment. As such, WS-ReliableMessaging by itself does not define all the features
27 required for a complete messaging solution. WS-ReliableMessaging is a building block that is used in
28 conjunction with other specifications and application-specific protocols to accommodate a wide variety of
29 protocols related to the operation of distributed Web services.

30 **Status:**

31 This document is a work in progress and will be updated to reflect issues as they are resolved by the
32 Web Services Reliable Exchange (WS-RX) Technical Committee.

77 1 Introduction

78 It is often a requirement for two Web services that wish to communicate to do so reliably in the presence
79 of software component, system, or network failures. The primary goal of this specification is to create a
80 modular mechanism for reliable delivery of messages. It defines a messaging protocol to identify, track,
81 and manage the reliable delivery of messages between a source and a destination. It also defines a
82 SOAP binding that is required for interoperability. Additional bindings may be defined.

83 This mechanism is extensible allowing additional functionality, such as security, to be tightly integrated.
84 This specification integrates with and complements the WS-Security [WS-Security], WS-Policy [WS-
85 Policy], and other Web services specifications. Combined, these allow for a broad range of reliable,
86 secure messaging options.

87 1.1 Goals and Requirements

88 1.1.1 Requirements

89 1.2 Notational Conventions

90 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD
91 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described
92 in RFC 2119 [KEYWORDS].

93 This specification uses the following syntax to define normative outlines for messages:

- 94 • The syntax appears as an XML instance, but values in italics indicate data types instead of values.
- 95 • Characters are appended to elements and attributes to indicate cardinality:
 - 96 ○ "?" (0 or 1)
 - 97 ○ "*" (0 or more)
 - 98 ○ "+" (1 or more)
- 99 • The character "|" is used to indicate a choice between alternatives.
- 100 • The characters "[" and "]" are used to indicate that contained items are to be treated as a group
101 with respect to cardinality or choice.
- 102 • An ellipsis (i.e. "...") indicates a point of extensibility that allows other child or attribute content
103 specified in this document. Additional children elements and/or attributes MAY be added at the
104 indicated extension points but they MUST NOT contradict the semantics of the parent and/or
105 owner, respectively. If an extension is not recognized it SHOULD be ignored.
- 106 • XML namespace prefixes (See Section [Namespace](#)) are used to indicate the namespace of the
107 element being defined.

108 1.3 Namespace

109 The XML namespace [XML-ns] URI that MUST be used by implementations of this specification is:

110 <http://docs.oasis-open.org/ws-rx/wsrn/200604>

111 Dereferencing the above URI will produce the Resource Directory Description Language [RDDL 2.0]
112 document that describes this namespace.

113 Table 1 lists the XML namespaces that are used in this specification. The choice of any namespace prefix
114 is arbitrary and not semantically significant.

115 The following namespaces are used in this document:

116 *Table 1*

Prefix	Namespace
S	(Either SOAP 1.1 or 1.2)
S11	http://schemas.xmlsoap.org/soap/envelope/
S12	http://www.w3.org/2003/05/soap-envelope
wsrn	http://docs.oasis-open.org/ws-rx/wsrn/200604
wsa	http://www.w3.org/2005/08/addressing
xs	http://www.w3.org/2001/XMLSchema

117 The normative schema for WS-ReliableMessaging can be found at:

118 <http://docs.oasis-open.org/ws-rx/wsrn/200604/wsrn-1.1-schema-200604.xsd>

119 All sections explicitly noted as examples are informational and are not to be considered normative.

120 If an action IRI is used by a system that uses the elements defined within this specification, and one is not
121 already defined per the rules of the WS-Addressing specification [WS-Addressing], then said system
122 MUST use an action IRI that consists of the WS-RM namespace URI concatenated with a '/', followed by
123 the message element name. For example:

124 `http://docs.oasis-open.org/ws-rx/wsrn/200604/SequenceAcknowledgement`

125 1.4 Compliance

126 An implementation is not compliant with this specification if it fails to satisfy one or more of the MUST or
127 REQUIRED level requirements defined herein. A SOAP Node MUST NOT use the XML namespace
128 identifier for this specification (listed in Section [Namespace](#)) within SOAP Envelopes unless it is compliant
129 with this specification.

130 Normative text within this specification takes precedence over normative outlines, which in turn take
131 precedence over the XML Schema [XML Schema Part 1, Part 2] descriptions.

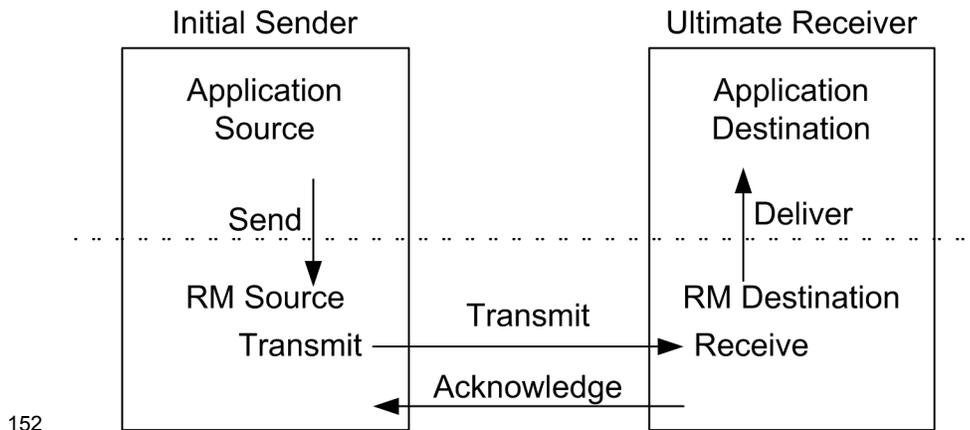

132 2 Reliable Messaging Model

133 Many errors may interrupt a conversation. Messages may be lost, duplicated or reordered. Further the
134 host systems may experience failures and lose volatile state.

135 The WS-ReliableMessaging specification defines an interoperable protocol that requires a Reliable
136 Messaging (RM) Source and Reliable Messaging (RM) Destination to ensure that each message
137 transmitted by the RM Source is successfully received by an RM Destination, or barring successful
138 receipt, that an RM Source can, except in the most extreme circumstances, accurately determine the
139 disposition of each message transmitted as perceived by the RM Destination, so as to resolve any in-
140 doubt status. Note that this specification makes no restriction on the scope of the RM Source or RM
141 Destination entities. For example, either may span multiple WSDL Ports or endpoints.

142 The protocol supports reliability features that enable ordered delivery, duplicate elimination, and
143 guaranteed receipt for the RMD. It is expected that the AD and RMD will implement as many of these or
144 as few of these characteristics as necessary to implement the AD. Regardless of which of the reliability
145 features are employed, the wire protocol does not change.

146 Figure 1 below illustrates the entities and events in a simple reliable exchange of messages. First, the
147 Application Source Sends a message for reliable delivery. The Reliable Messaging (RM) Source accepts
148 the message and Transmits it one or more times. After receiving the message, the RM Destination
149 Acknowledges it. Finally, the RM Destination delivers the message to the Application Destination. The
150 exact roles the entities play and the complete meaning of the events will be defined throughout this
151 specification.

152
153 Figure 1: Reliable Messaging Model

154 2.1 Glossary

155 The following definitions are used throughout this specification:

156 **Acknowledgement:** The communication from the RM Destination to the RM Source indicating the
157 successful receipt of a message.

158 **Application Destination:** The endpoint to which a message is Delivered.

159 **Application Source:** The endpoint that Sends a message.

160 **Deliver:** The act of transferring a message from the RM Destination to the Application Destination. The
161 reliability guarantee is fulfilled at this point.

162 **Endpoint:** As defined in the WS-Addressing specification [WS-Addressing]; a Web service endpoint is a
163 (referenceable) entity, processor, or resource to which Web service messages can be addressed.
164 Endpoint references convey the information needed to address a Web service endpoint.

165 **Receive:** The act of reading a message from a network connection and qualifying it as relevant to RM
166 Destination functions.

167 **RM Destination:** For any one reliably sent message the endpoint that receives the message.

168 **RM Source:** The endpoint that transmits the message.

169 **Send:** The act of submitting a message to the RM Source for reliable delivery. The reliability guarantee
170 begins at this point.

171 **Transmit:** The act of writing a message to a network connection.

172 **2.2 Protocol Preconditions**

173 The correct operation of the protocol requires that a number of preconditions **MUST** be established prior
174 to the processing of the initial sequenced message:

- 175 • For any single message exchange the RM Source **MUST** have an endpoint reference that uniquely
176 identifies the RM Destination endpoint.
- 177 • The RM Source **MUST** have knowledge of the destination's policies, if any, and the RM Source
178 **MUST** be capable of formulating messages that adhere to this policy.

179 If a secure exchange of messages is required, then the RM Source and RM Destination **MUST** have a
180 security context.

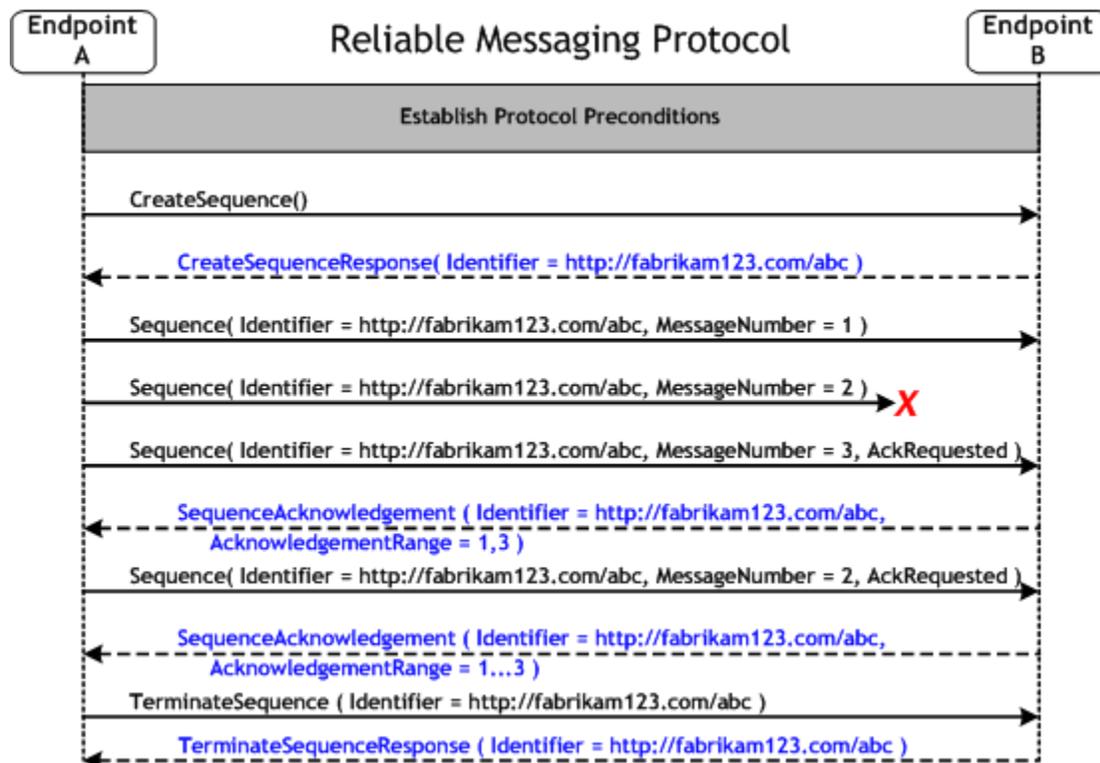

181 **2.3 Protocol Invariants**

182 During the lifetime of a Sequence, two invariants are **REQUIRED** for correctness:

- 183 • The RM Source **MUST** assign each message within a Sequence a message number (defined
184 below) beginning at 1 and increasing by exactly 1 for each subsequent message. These numbers
185 **MUST** be assigned in the same order in which messages are sent by the Application Source.
- 186 • Within every acknowledgement it issues, the RM Destination **MUST** include one or more
187 acknowledgement ranges that contain the message number of every message successfully
188 received by the RM Destination. The RM Destination **MUST** exclude the message numbers of any
189 messages it has not received.

190 **2.4 Example Message Exchange**

191 Figure 2 illustrates a possible message exchange between two reliable messaging endpoints A and B.

192 Figure 2: The WS-ReliableMessaging Protocol

- 193 1. The protocol preconditions are established. These include policy exchange, endpoint resolution,
194 establishing trust.
- 193 2. The RM Source requests creation of a new Sequence.
- 193 3. The RM Destination creates a Sequence by returning a globally unique identifier.
- 193 4. The RM Source begins sending messages beginning with MessageNumber 1. In the figure above,
194 the RM Source sends 3 messages.
- 193 5. Since the 3rd message is the last in this exchange, the RM Source includes a
194 `<wsrm:AckRequested>` Header.
- 193 6. The 2nd message is lost in transit.
- 193 7. The RM Destination acknowledges receipt of message numbers 1 and 3 as a result of receiving the
194 RM Source's `<wsrm:AckRequested>` Header.
- 193 8. The RM Source retransmits the 2nd message. This is a new message on the underlying transport,
194 but it has the same Sequence identifier and message number so the RM Destination can recognize
195 it as equivalent to the earlier message, in case both are received.
- 193 9. The RM Source includes an `<wsrm:AckRequested>` element so the RM Destination will expedite
194 an acknowledgement.
- 193 10. The RM Destination receives the second transmission of the message with MessageNumber 2 and
194 acknowledges receipt of message numbers 1, 2, and 3.
- 193 11. The RM Source receives this acknowledgement and sends a `TerminateSequence` message to the
194 RM Destination indicating that the Sequence is completed and reclaims any resources associated
195 with the Sequence.
- 193 12. The RM Destination receives the `TerminateSequence` message indicating that the RM Source will
194 not be sending any more messages. The RM Destination sends a `TerminateSequenceResponse`
195 message to the RM Source and reclaims any resources associated with the Sequence.

193 The RM Source will expect to receive acknowledgements from the RM Destination during the course of a
194 message exchange at occasions described in Section 3 below. Should an acknowledgement not be
195 received in a timely fashion, the RM Source MUST re-transmit the request since either the request or the
196 associated acknowledgement might have been lost. Since the nature and dynamic characteristics of the
197 underlying transport and potential intermediaries are unknown in the general case, the timing of re-
198 transmissions cannot be specified. Additionally, over-aggressive re-transmissions have been
199 demonstrated to cause transport or intermediary flooding which are counterproductive to the intention of
200 providing a reliable exchange of messages. Consequently, implementers are encouraged to utilize
201 adaptive mechanisms that dynamically adjust re-transmission time and the back-off intervals that are
202 appropriate to the nature of the transports and intermediaries envisioned. For the case of TCP/IP
203 transports, a mechanism similar to that described as RTTM in RFC 1323 [RTTM] should be considered.

193 Now that the basic model has been outlined, the details of the elements used in this protocol are now
194 provided in Section 3.

193 3 RM Protocol Elements

193 The following protocol elements define extensibility points at various places. Implementations MAY add
194 child elements and/or attributes at the indicated extension points but MUST NOT contradict the semantics
195 of the parent and/or owner, respectively. If a receiver does not recognize an extension, the receiver
196 SHOULD ignore the extension.

197 3.1 Sequence Creation

197 The RM Source MUST request creation of an outbound Sequence by sending a
198 `<wsrm:CreateSequence>` element in the body of a message to the RM Destination which in turn
199 responds either with a message containing `<wsrm:CreateSequenceResponse>` or a
200 `CreateSequenceRefused` fault. The RM Source MAY include an offer to create an inbound
201 Sequence within the `<wsrm:CreateSequence>` message. This offer is either accepted or rejected
202 by the RM Destination in the `<wsrm:CreateSequenceResponse>` message.

203 The SOAP version used for the `CreateSequence` message SHOULD be used for all subsequent
204 messages in or for that Sequence, sent by either the RMS or the RMD.

205 The following exemplar defines the `<wsrm:CreateSequence>` syntax:

```
206 <wsrm:CreateSequence ...>  
207   <wsrm:AcksTo ...> wsa:EndpointReferenceType </wsrm:AcksTo>  
208   <wsrm:Expires ...> xs:duration </wsrm:Expires> ?  
209   <wsrm:Offer ...>  
210     <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>  
211     <wsrm:Endpoint> wsa:EndpointReferenceType </wsrm:Endpoint>  
212     <wsrm:Expires ...> xs:duration </wsrm:Expires> ?  
213     ...  
214   </wsrm:Offer> ?  
215   ...  
216 </wsrm:CreateSequence>
```

217 `/wsrm:CreateSequence`

218 This element requests creation of a new Sequence between the RM Source that sends it, and the RM
219 Destination to which it is sent. The RM Source MUST NOT send this element as a header block. The RM
220 Destination MUST respond either with a `<wsrm:CreateSequenceResponse>` response message or a
221 `CreateSequenceRefused` fault.

222 `/wsrm:CreateSequence/wsrm:AcksTo`

223 The RM Source MUST include this element in any `CreateSequence` message it sends. This element is of
224 type `wsa:EndpointReferenceType` (as specified by WS-Addressing [WS-Addressing]). It specifies the
225 endpoint reference to which messages containing `<wsrm:SequenceAcknowledgement>` header
226 blocks and faults related to the created Sequence are to be sent, unless otherwise noted in this
227 specification (for example, see Section 3.2).

228 Implementations MUST NOT use an endpoint reference in the `AcksTo` element that would prevent the
229 sending of Sequence Acknowledgments back to the RM Source. For example, using the WS-Addressing
230 "none" IRI would make it impossible for the RM Destination to ever send Sequence Acknowledgments.

231 `/wsrm:CreateSequence/wsrm:Expires`

232 This element, if present, of type `xs:duration` specifies the RM Source's requested duration for the
233 Sequence. The RM Destination MAY either accept the requested duration or assign a lesser value of its

234 choosing. A value of 'PT0S' indicates that the Sequence will never expire. Absence of the element
235 indicates an implied value of 'PT0S'.

236 /wsmr:CreateSequence/wsmr:Expires/@{any}

237 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
238 element.

239 /wsmr:CreateSequence/wsmr:Offer

240 This element, if present, enables an RM Source to offer a corresponding Sequence for the reliable
241 exchange of messages transmitted from RM Destination to RM Source.

242 /wsmr:CreateSequence/wsmr:Offer/wsmr:Identifier

243 An RM Source that includes a <wsmr:Offer> element within a CreateSequence message MUST include
244 this element as a child of the <wsmr:Offer> element. The RM Source MUST set the value of this
245 element to an absolute URI (conformant with RFC3986 [URI]) that will uniquely identify the offered
246 Sequence.

247 /wsmr:CreateSequence/wsmr:Offer/wsmr:Identifier/@{any}

248 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
249 element.

250 /wsmr:CreateSequence/wsmr:Offer/wsmr:Endpoint

251 An RM Source that includes a <wsmr:Offer> element within a CreateSequence message MUST include
252 this element as a child of the <wsmr:Offer> element. This element, of type
253 wsa:EndpointReferenceType (as specified by WS-Addressing [WSAddressing]), specifies the
254 endpoint reference to which WS-RM protocol messages related to the offered Sequence are to be sent.

255 /wsmr:CreateSequence/wsmr:Offer/wsmr:Expires

256 This element, if present, of type xs:duration specifies the duration for the Sequence. A value of 'PT0S'
257 indicates that the Sequence will never expire. Absence of the element indicates an implied value of
258 'PT0S'.

259 /wsmr:CreateSequence/wsmr:Offer/wsmr:Expires/@{any}

260 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
261 element.

262 /wsmr:CreateSequence/wsmr:Offer/{any}

263 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
264 to be passed.

265 /wsmr:CreateSequence/wsmr:Offer/@{any}

266 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
267 to be passed.

268 /wsmr:CreateSequence/{any}

269 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
270 to be passed.

271 /wsmr:CreateSequence/@{any}

272 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
273 element.

274 A `<wsrm:CreateSequenceResponse>` is sent in the body of a response message by an RM
275 Destination in response to receipt of a `<wsrm:CreateSequence>` request message. It carries the
276 `<wsrm:Identifier>` of the created Sequence and indicates that the RM Source may begin sending
277 messages in the context of the identified Sequence.

278 The following exemplar defines the `<wsrm:CreateSequenceResponse>` syntax:

```
279 <wsrm:CreateSequenceResponse ...>  
280   <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>  
281   <wsrm:Expires> xs:duration </wsrm:Expires> ?  
282   <wsrm:AcknowledgementInterval Milliseconds="xs:unsignedLong" ... /> ?  
283   <wsrm:Accept ...>  
284     <wsrm:AcksTo ...> wsa:EndpointReferenceType </wsrm:AcksTo>  
285     ...  
286   </wsrm:Accept> ?  
287   ...  
288 </wsrm:CreateSequenceResponse>
```

289 `/wsrm:CreateSequenceResponse`

290 This element is sent in the body of the response message in response to a `<wsrm:CreateSequence>`
291 request message. It indicates that the RM Destination has created a new Sequence at the request of the
292 RM Source. The RM Destination MUST NOT send this element as a header block.

293 `/wsrm:CreateSequenceResponse/wsrm:Identifier`

294 The RM Destination MUST include this element within any `CreateSequenceResponse` messages it sends.
295 The RM Destination MUST set the value of this element to the absolute URI (conformant with RFC3986)
296 of the Sequence that has been created by the RM Destination.

297 `/wsrm:CreateSequenceResponse/wsrm:Identifier/@{any}`

298 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
299 element.

300 `/wsrm:CreateSequenceResponse/wsrm:Expires`

301 This element, if present, of type `xs:duration` accepts or refines the RM Source's requested duration for
302 the Sequence. A value of 'PT0S' indicates that the Sequence will never expire. Absence of the element
303 indicates an implied value of 'PT0S'. The RM Destination MUST set the value of this element to be equal
304 to or less than the value requested by the RM Source in the corresponding `<wsrm:CreateSequence>`
305 message.

306 `/wsrm:CreateSequenceResponse/wsrm:Expires/@{any}`

307 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
308 element.

309 `/wsrm:CreateSequenceResponse/wsrm:AcknowledgementInterval`

310 This element, if present, specifies the duration after which the RM Destination will transmit an
311 acknowledgement. If omitted, there is no implied value.

312 `/wsrm:CreateSequenceResponse/wsrm:AcknowledgementInterval/@Milliseconds`

313 The acknowledgement interval, specified in milliseconds.

314 `/wsrm:CreateSequenceResponse/wsrm:AcknowledgementInterval/@{any}`

315 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
316 element.

317 /wsrm:CreateSequenceResponse/wsrm:Accept

318 This element, if present, enables an RM Destination to accept the offer of a corresponding Sequence for
319 the reliable exchange of messages transmitted from RM Destination to RM Source.

320 **Note:** If a <wsrm:CreateSequenceResponse> is returned without a child <wsrm:Accept> in response
321 to a <wsrm:CreateSequence> that contained a child <wsrm:Offer>, then the RM Source MAY
322 immediately reclaim any resources associated with the unused offered Sequence.

323 /wsrm:CreateSequenceResponse/wsrm:Accept/wsrm:AcksTo

324 An RM Destination that includes a <wsrm:Accept> element within a CreateSequenceResponse
325 message MUST include this element as a child of the <wsrm:Accept> element. This element, of type
326 wsam:EndpointReferenceType (as specified by WS-Addressing [WS-Addressing]), specifies the endpoint
327 reference to which <wsrm:SequenceAcknowledgement> messages related to the accepted Sequence
328 are to be sent.

329 /wsrm:CreateSequenceResponse/wsrm:Accept/{any}

330 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
331 to be passed.

332 /wsrm:CreateSequenceResponse/wsrm:Accept/@{any}

333 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
334 to be passed.

335 /wsrm:CreateSequenceResponse/{any}

336 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
337 to be passed.

338 /wsrm:CreateSequenceResponse/@{any}

339 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
340 element.

341 **3.2 Closing A Sequence**

342 There may be times during the use of an RM Sequence that the RM Source or RM Destination will wish to
343 discontinue using a Sequence. Simply terminating the Sequence discards the state managed by the RM
344 Destination, leaving the RM Source unaware of the final ranges of messages that were successfully
345 delivered to the RM Destination. To ensure that the Sequence ends with a known final state both the RM
346 Source and RM Destination may choose to close the Sequence before terminating it.

347 If the RM Source wishes to close the Sequence, then it sends a <wsrm:CloseSequence> element, in
348 the body of a message, to the RM Destination. This message indicates that the RM Destination MUST
349 NOT receive any new messages for the specified Sequence, other than those already received at the time
350 the <wsrm:CloseSequence> element is interpreted by the RMD. Upon receipt of this message, or
351 subsequent to the RM Destination closing the Sequence of its own volition, the RM Destination MUST
352 include a final <wsrm:SequenceAcknowledgement> (within which the RM Destination MUST include
353 the <wsrm:Final> element) header block on any messages associated with the Sequence destined to
354 the RM Source, including the <wsrm:CloseSequenceResponse> message or on any Sequence Fault
355 transmitted to the RMS.

356 While the RM Destination MUST NOT receive any new messages for the specified Sequence it MUST still
357 process RM protocol messages. For example, it MUST respond to AckRequested, TerminateSequence
358 as well as CloseSequence messages. Note, subsequent CloseSequence messages have no effect on the
359 state of the Sequence.

360 In the case where the RM Destination wishes to discontinue use of a Sequence it is RECOMMENDED
361 that it close the Sequence. Please see `<wsrm:Final>` and the SequenceClosed fault. Whenever
362 possible the SequenceClosed Fault SHOULD be used in place of the SequenceTerminated Fault,
363 whenever possible, to allow the RM Source to still receive Acknowledgements.

364 The following exemplar defines the CloseSequence syntax:

```
365 <wsrm:CloseSequence ...>  
366   <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>  
367   ...  
368 </wsrm:CloseSequence>
```

369 /wsrm:CloseSequence

370 This element is sent by an RM Source to indicate that the RM Destination MUST NOT receive any new
371 messages for this Sequence. A SequenceClosed fault MUST be generated by the RM Destination when it
372 receives a message for a Sequence that is closed.

373 /wsrm:CloseSequence/wsrm:Identifier

374 The RM Source MUST include this element in any CloseSequence messages it sends. The RM Source
375 MUST set the value of this element to the absolute URI (conformant with RFC3986) of the Sequence that
376 is being closed.

377 /wsrm:CloseSequence/wsrm:Identifier/@{any}

378 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
379 element.

380 /wsrm:CloseSequence/{any}

381 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
382 to be passed.

383 /wsrm:CloseSequence@{any}

384 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
385 element.

386 A `<wsrm:CloseSequenceResponse>` is sent in the body of a response message by an RM Destination
387 in response to receipt of a `<wsrm:CloseSequence>` request message. It indicates that the RM
388 Destination has closed the Sequence.

389 The following exemplar defines the `<wsrm:CloseSequenceResponse>` syntax:

```
390 <wsrm:CloseSequenceResponse ...>  
391   <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>  
392   ...  
393 </wsrm:CloseSequenceResponse>
```

394 /wsrm:CloseSequenceResponse

395 This element is sent in the body of a response message by an RM Destination in response to receipt of a
396 `<wsrm:CloseSequence>` request message. It indicates that the RM Destination has closed the
397 Sequence.

398 /wsrm:CloseSequenceResponse/wsrm:Identifier

399 The RM Destination MUST include this element in any CloseSequenceResponse message it sends. The
400 RM Destination MUST set the value of this element to the absolute URI (conformant with RFC3986) of the
401 Sequence that is being closed.

402 /wsmr:CloseSequenceResponse/wsmr:Identifier/@{any}

403 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
404 element.

405 /wsmr:CloseSequenceResponse/{any}

406 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
407 to be passed.

408 /wsmr:CloseSequenceResponse@{any}

409 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
410 element.

411 **3.3 Sequence Termination**

412 When the RM Source has completed its use of the Sequence it sends a `<wsmr:TerminateSequence>`
413 element, in the body of a message, to the RM Destination to indicate that the Sequence is complete and
414 that it will not be sending any further messages related to the Sequence. The RM Destination can safely
415 reclaim any resources associated with the Sequence upon receipt of the `<wsmr:TerminateSequence>`
416 message. Under normal usage the RM Source will complete its use of the Sequence when all of the
417 messages in the Sequence have been acknowledged. However, the RM Source is free to Terminate or
418 Close a Sequence at any time regardless of the acknowledgement state of the messages.

419 The following exemplar defines the TerminateSequence syntax:

```
420 <wsmr:TerminateSequence ...>  
421   <wsmr:Identifier ...> xs:anyURI </wsmr:Identifier>  
422   ...  
423 </wsmr:TerminateSequence>
```

424 /wsmr:TerminateSequence

425 This element is sent by an RM Source to indicate it has completed its use of the Sequence. It indicates
426 that the RM Destination can safely reclaim any resources related to the identified Sequence. The RM
427 Source MUST NOT send this element as a header block. The RM Source MAY retransmit this element.
428 Once this element is sent, other than this element, the RM Source MUST NOT send any additional
429 message to the RM Destination referencing this Sequence.

430 /wsmr:TerminateSequence/wsmr:Identifier

431 The RM Source MUST include this element in any TerminateSequence message it sends. The RM
432 Source MUST set the value of this element to the absolute URI (conformant with RFC3986) of the
433 Sequence that is being terminated.

434 /wsmr:TerminateSequence/wsmr:Identifier/@{any}

435 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
436 element.

437 /wsmr:TerminateSequence/{any}

438 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
439 to be passed.

440 /wsmr:TerminateSequence/@{any}

441 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
442 element.

443 A <wsmr:TerminateSequenceResponse> is sent in the body of a response message by an RM
444 Destination in response to receipt of a <wsmr:TerminateSequence> request message. It indicates that
445 the RM Destination has terminated the Sequence.

446 The following exemplar defines the <wsmr:TerminateSequenceResponse> syntax:

```
447 <wsmr:TerminateSequenceResponse ...>  
448   <wsmr:Identifier ...> xs:anyURI </wsmr:Identifier>  
449   ...  
450 </wsmr:TerminateSequenceResponse>
```

451 /wsmr:TerminateSequenceResponse

452 This element is sent in the body of a response message by an RM Destination in response to receipt of a
453 <wsmr:TerminateSequence> request message. It indicates that the RM Destination has terminated
454 the sequence. The RM Destination MUST NOT send this element as a header block.

455 /wsmr:TerminateSequenceResponse/wsmr:Identifier

456 The RMD Destination MUST include this element in any TerminateSequenceResponse message it sends.
457 The RMD Destination MUST set the value of this element to the absolute URI (conformant with RFC3986)
458 of the Sequence that is being terminated.

459 /wsmr:TerminateSequenceResponse/wsmr:Identifier/@{any}

460 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
461 element.

462 /wsmr:TerminateSequenceResponse/{any}

463 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
464 to be passed.

465 /wsmr:TerminateSequenceResponse/@{any}

466 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
467 element.

468 On receipt of a <wsmr:TerminateSequence> message an RM Destination MUST respond with a
469 corresponding <wsmr:TerminateSequenceResponse> message or generate a fault.

470 3.4 Sequences

471 The RM protocol uses a <wsmr:Sequence> header block to track and manage the reliable delivery of
472 messages. The RM Source MUST include a <wsmr:Sequence> header block in all messages for
473 which reliable delivery is required. The RM Source MUST identify Sequences with unique
474 <wsmr:Identifier> elements and the RM Source MUST assign each message within a Sequence a
475 <wsmr:MessageNumber> element that increments by 1 from an initial value of 1. These values are
476 contained within a <wsmr:Sequence> header block accompanying each message being delivered in the
477 context of a Sequence.

478 The RM Source MUST NOT include more than one <wsmr:Sequence> header block in any message.

479 A following exemplar defines its syntax:

```

480 <wsm:Sequence ...>
481   <wsm:Identifier ...> xs:anyURI </wsm:Identifier>
482   <wsm:MessageNumber> wsm:MessageNumberType </wsm:MessageNumber>
483   ...
484 </wsm:Sequence>

```

485 The following describes the content model of the Sequence header block.

486 /wsm:Sequence

487 This protocol element associates the message in which it is contained with a previously established RM
488 Sequence. It contains the Sequence's unique identifier and the containing message's ordinal position
489 within that Sequence. The RM Destination MUST understand the <wsm:Sequence> header block. The
490 RM Source MUST assign a `mustUnderstand` attribute with a value 1/true (from the namespace
491 corresponding to the version of SOAP to which the <wsm:Sequence> SOAP header block is bound) to
492 the <wsm:Sequence> header block element.

493 /wsm:Sequence/wsm:Identifier

494 An RM Source that includes a <wsm:Sequence> header block in a SOAP envelope MUST include this
495 element in that header block. The RM Source MUST set the value of this element to the absolute URI
496 (conformant with RFC3986) that uniquely identifies the Sequence.

497 /wsm:Sequence/wsm:Identifier/@{any}

498 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
499 element.

500 /wsm:Sequence/wsm:MessageNumber

501 The RM Source MUST include this element within any Sequence headers it creates. This element is of
502 type `wsm:MessageNumberType`. It represents the ordinal position of the message within a Sequence.
503 Sequence message numbers start at 1 and monotonically increase throughout the Sequence. If the
504 message number exceeds the internal limitations of an RM Source or RM Destination or reaches the
505 maximum value of 9,223,372,036,854,775,807 the RM Source or Destination MUST generate a
506 `MessageNumberRollover` fault.

507 /wsm:Sequence/{any}

508 This is an extensibility mechanism to allow different types of information, based on a schema, to be
509 passed.

510 /wsm:Sequence/@{any}

511 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
512 element.

513 The following example illustrates a Sequence header block.

```

514 <wsm:Sequence>
515   <wsm:Identifier>http://example.com/abc</wsm:Identifier>
516   <wsm:MessageNumber>10</wsm:MessageNumber>
517 </wsm:Sequence>

```

518 3.5 Request Acknowledgement

519 The purpose of the <wsm:AckRequested> header block is to signal to the RM Destination that the RM
520 Source is requesting that a <wsm:SequenceAcknowledgement> be sent.

521 The RM Source MAY request an acknowledgement message from the RM Destination at any time by
522 including an `<wsrm:AckRequested>` header block in any message targeted to the RM Destination. An
523 RM Destination that receives a message that contains an `<wsrm:AckRequested>` header block MUST
524 send a message containing a `<wsrm:SequenceAcknowledgement>` header block to the `wsrm:AcksTo`
525 endpoint reference (see Section 3.1). If a non-mustUnderstand fault occurs when processing an RM
526 Header that was piggy-backed on another message, a fault MUST be generated, but the processing of
527 the original message MUST NOT be affected. It is RECOMMENDED that the RMD return a
528 `<wsrm:AcknowledgementRange>` or `<wsrm:None>` element instead of a `<wsrm:Nack>` element (see
529 below).

530 The following exemplar defines its syntax:

```
531 <wsrm:AckRequested ...>  
532   <wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>  
  
533   ...  
534 </wsrm:AckRequested>
```

535 `/wsrm:AckRequested`

536 This element requests an acknowledgement for the identified Sequence.

537 `/wsrm:AckRequested/wsrm:Identifier`

538 An RM Source that includes a `<wsrm:AckRequested>` header block in a SOAP envelope MUST include
539 this element in that header block. The RM Source MUST set the value of this element to the absolute URI
540 (conformant with RFC3986) that uniquely identifies the Sequence to which the request applies.

541 `/wsrm:AckRequested/wsrm:Identifier/@{any}`

542 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
543 element.

544 `/wsrm:AckRequested/{any}`

545 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
546 to be passed.

547 `/wsrm:AckRequested/@{any}`

548 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
549 element.

550 **3.6 Sequence Acknowledgement**

551 The RM Destination informs the RM Source of successful message receipt using a
552 `<wsrm:SequenceAcknowledgement>` header block. The RM Destination MAY transmit the
553 `<wsrm:SequenceAcknowledgement>` header block independently or it MAY include the
554 `<wsrm:SequenceAcknowledgement>` header block on any message targeted to the `AcksTo` EPR. The
555 RM Destination MAY send a `<wsrm:SequenceAcknowledgement>` header block at any point during
556 which the Sequence is valid. Acknowledgements can be explicitly requested using the
557 `<wsrm:AckRequested>` directive (see Section [Request Acknowledgement](#)). If a non-mustUnderstand
558 fault occurs when processing an RM Header that was piggy-backed on another message, a fault MUST
559 be generated, but the processing of the original message MUST NOT be affected.

560 A RMD MAY include a `wsrm:SequenceAcknowledgement` header block on any SOAP envelope targeted
561 to the endpoint referenced by the `wsrm:AcksTo` EPR. This concept is often referred to as "piggy-backing"
562 Sequence acknowledgements.

563 During creation of a Sequence the RM Source MAY specify the WS-Addressing anonymous IRI as the
564 address of the <wsmr:AcksTo> EPR for that Sequence. When RM Source specifies the WS-Addressing
565 anonymous IRI as the address of the <wsmr:AcksTo> EPR, the RM Destination MUST transmit any
566 <wsmr:SequenceAcknowledgement> headers for the created Sequence in a SOAP envelope to be
567 transmitted on the protocol binding-specific channel. Such a channel is provided by the context of a
568 received message containing a SOAP envelope that contains a <wsmr:Sequence> header block and/or
569 a <wsmr:AckRequested> header block for that same Sequence identifier.

570 The following exemplar defines its syntax:

```
571 <wsmr:SequenceAcknowledgement ...>
572   <wsmr:Identifier ...> xs:anyURI </wsmr:Identifier>
573   [ [ [ <wsmr:AcknowledgementRange ...
574         Upper="wsmr:MessageNumberType"
575         Lower="wsmr:MessageNumberType"/> +
576
577         | <wsmr:None/> ]
578         <wsmr:Final/> ? ]
579   | <wsmr:Nack> wsmr:MessageNumberType </wsmr:Nack> + ]
580   ...
581 </wsmr:SequenceAcknowledgement>
```

582 The following describes the content model of the <wsmr:SequenceAcknowledgement> header block.

583 /wsmr:SequenceAcknowledgement

584 This element contains the Sequence acknowledgement information.

585 /wsmr:SequenceAcknowledgement/wsmr:Identifier

586 An RM Destination that includes a <wsmr:SequenceAcknowledgement> header block in a SOAP
587 envelope MUST include this element in that header block. The RM Destination MUST set the value of this
588 element to the absolute URI (conformant with RFC3986) that uniquely identifies the Sequence. The RM
589 Destination MUST NOT include multiple <wsmr:SequenceAcknowledgement> header blocks that
590 share the same value for <wsmr:Identifier> within the same SOAP envelope.

591 /wsmr:SequenceAcknowledgement/wsmr:Identifier/@{any}

592 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
593 element.

594 /wsmr:SequenceAcknowledgement/wsmr:AcknowledgementRange

595 The RM Destination MAY include one or more instances of this element within a
596 <wsmr:SequenceAcknowledgement> header block. It contains a range of Sequence
597 MessageNumbers successfully received by the RM Destination. The ranges SHOULD NOT overlap. The
598 RM Destination MUST NOT include this element if a sibling <wsmr:Nack> or <wsmr:None> element is
599 also present as a child of <wsmr:SequenceAcknowledgement>.

600 /wsmr:SequenceAcknowledgement/wsmr:AcknowledgementRange/@Upper

601 An RM Destination that includes a <wsmr:SequenceAcknowledgement> header block containing one
602 or more <wsmr:AcknowledgementRange> elements MUST include this attribute as a child of the
603 <wsmr:AcknowledgementRange>. The RM Destination MUST set the value of this attribute to a
604 wsmr:MessageNumberType representing the <wsmr:MessageNumber> of the highest contiguous
605 message in a Sequence range received by the RM Destination.

606 /wsmr:SequenceAcknowledgement/wsmr:AcknowledgementRange/@Lower

607 An RM Destination that includes a `<wsrm:SequenceAcknowledgement>` header block containing one
608 or more `<wsrm:AcknowledgementRange>` elements MUST include this attribute as a child of the
609 `<wsrm:AcknowledgementRange>`. The RM Destination MUST set the value of this attribute to a
610 `wsrm:MessageNumberType` representing the `<wsrm:MessageNumber>` of the lowest contiguous
611 message in a Sequence range received by the RM Destination.

612 `/wsrm:SequenceAcknowledgement/wsrm:AcknowledgementRange/@{any}`

613 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
614 element.

615 `/wsrm:SequenceAcknowledgement/wsrm:Final`

616 The RM Destination MAY include this element within a `<wsrm:SequenceAcknowledgement>` header
617 block. This element indicates that the RM Destination is not receiving new messages for the specified
618 Sequence. The RM Source can be assured that the ranges of messages acknowledged by this
619 `SequenceAcknowledgement` header block will not change in the future. The RM Destination MUST
620 include this element when the Sequence is closed. Note: the RM Destination MUST NOT include this
621 element when sending a Nack; it can only be used when sending `<wsrm:AcknowledgementRange>`s or
622 `<wsrm:None>`.

623 `/wsrm:SequenceAcknowledgement/wsrm:Nack`

624 The RM Destination MAY include this element within a `<wsrm:SequenceAcknowledgement>` header
625 block. If used, the RM Destination MUST set the value of this element to a `wsrm:MessageNumberType`
626 representing the `<wsrm:MessageNumber>` of an unreceived message in a Sequence. The RM
627 Destination MUST NOT include a `<wsrm:Nack>` element if a sibling
628 `<wsrm:AcknowledgementRange>` or `<wsrm:None>` element is also present as a child of
629 `<wsrm:SequenceAcknowledgement>`. Upon the receipt of a Nack, an RM Source SHOULD retransmit
630 the message identified by the Nack. The RM Destination MUST NOT issue a
631 `<wsrm:SequenceAcknowledgement>` containing a `<wsrm:Nack>` for a message that it has previously
632 acknowledged within a `<wsrm:AcknowledgementRange>`. The RM Source SHOULD ignore a
633 `<wsrm:SequenceAcknowledgement>` containing a `<wsrm:Nack>` for a message that has previously
634 been acknowledged within a `<wsrm:AcknowledgementRange>`.

635 `/wsrm:SequenceAcknowledgement/wsrm:None`

636 The RM Destination MUST include this element within a `<wsrm:SequenceAcknowledgement>` header
637 block if the RM Destination has not received any messages for the specified Sequence. The RM
638 Destination MUST NOT include this element if a sibling `<wsrm:AcknowledgementRange>` or
639 `<wsrm:Nack>` element is also present as a child of the `<wsrm:SequenceAcknowledgement>`.

640 `/wsrm:SequenceAcknowledgement/{any}`

641 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
642 to be passed.

643 `/wsrm:SequenceAcknowledgement/@{any}`

644 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
645 element.

646 The following examples illustrate `<wsrm:SequenceAcknowledgement>` elements:

- 647 • Message numbers 1..10 inclusive in a Sequence have been received by the RM Destination.

```
648 <wsrm:SequenceAcknowledgement>  
649   <wsrm:Identifier>http://example.com/abc</wsrm:Identifier>
```

```
650     <wsrm:AcknowledgementRange Upper="10" Lower="1"/>
651 </wsrm:SequenceAcknowledgement>
```

- 652 • Message numbers 1..2, 4..6, and 8..10 inclusive in a Sequence have been received by the RM
653 Destination, messages 3 and 7 have not been received.

```
654 <wsrm:SequenceAcknowledgement>
655     <wsrm:Identifier>http://example.com/abc</wsrm:Identifier>
656     <wsrm:AcknowledgementRange Upper="2" Lower="1"/>
657     <wsrm:AcknowledgementRange Upper="6" Lower="4"/>
658     <wsrm:AcknowledgementRange Upper="10" Lower="8"/>
659 </wsrm:SequenceAcknowledgement>
```

- 660 • Message number 3 in a Sequence has not been received by the RM Destination.

```
661 <wsrm:SequenceAcknowledgement>
662     <wsrm:Identifier>http://example.com/abc</wsrm:Identifier>
663     <wsrm:Nack>3</wsrm:Nack>
664 </wsrm:SequenceAcknowledgement>
```

665 4 Faults

665 The faults defined in this section fall into one of two categories; those faults that are the result of
666 messages or operations within a specific Sequence and those faults that are not. By their nature the
667 CreateSequenceRefused, UnknownSequence, and WSRMRequired faults cannot be correlated with a
668 Sequence. All other faults defined in this section relate to the processing of WS-RM protocol messages or
669 messages containing WS-RM header blocks targeted at a specific Sequence and are collectively referred
670 to as "Sequence faults".

665 Faults for the CreateSequence message exchange are treated as defined in WS-Addressing.
666 CreateSequenceRefused is a possible fault reply for this operation. UnknownSequence is a fault
667 generated by endpoints when messages carrying RM header blocks targeted at unrecognized or
668 terminated Sequences are detected, these faults are also treated as defined in WS-Addressing. All other
669 faults in this section relate to the processing of RM header blocks targeted at known Sequences and are
670 collectively referred to as Sequence faults. Entities that generate Sequence faults SHOULD send those
671 faults to the same [destination] as `<wsrm:SequenceAcknowledgement>` messages. These faults are
672 correlated using the Sequence identifier carried in the detail.

665 Entities that generate WS-ReliableMessaging faults MUST include as the [action] property the default fault
666 action IRI defined in the version of WS-Addressing used in the message. The value from the current
667 version is below for informational purposes:

```
665 http://schemas.xmlsoap.org/ws/2004/08/addressing/fault
```

665 The faults defined in this section are generated if the condition stated in the preamble is met. Fault
666 handling rules are defined in section 4 of WS-Addressing.

665 The definitions of faults use the following properties:

665 [Code] The fault code.

665 [Subcode] The fault subcode.

665 [Reason] The English language reason element.

665 [Detail] The detail element. If absent, no detail element is defined for the fault.

665 Entities that generate WS-ReliableMessaging faults MUST set the [Code] property to either "Sender" or
666 "Receiver". These properties are serialized into text XML as follows:

SOAP Version	Sender	Receiver
SOAP 1.1	S11:Client	S11:Server
SOAP 1.2	S:Sender	S:Receiver

665 The properties above bind to a SOAP 1.2 fault as follows:

```
665 <S:Envelope>  
665   <S:Header>  
665     <wsa:Action>  
665       http://schemas.xmlsoap.org/ws/2004/08/addressing/fault  
665     </wsa:Action>  
665     <!-- Headers elided for clarity. -->  
665   </S:Header>  
665   <S:Body>  
665     <S:Fault>  
665       <S:Code>  
665         <S:Value> [Code] </S:Value>  
665       <S:Subcode>
```

```

665     <S:Value> [Subcode] </S:Value>
665     </S:Subcode>
665   </S:Code>
665   <S:Reason>
665     <S:Text xml:lang="en"> [Reason] </S:Text>
665   </S:Reason>
665   <S:Detail>
665     [Detail]
665     ...
665   </S:Detail>
665 </S:Fault>
665 </S:Body>
665 </S:Envelope>

```

665 The properties above bind to a SOAP 1.1 fault as follows when the fault is triggered by processing an RM
666 header block:

```

665 <S11:Envelope>
665   <S11:Header>
665     <wsrm:SequenceFault>
665       <wsrm:FaultCode> wsrm:FaultCodes </wsrm:FaultCode>
665       <wsrm:Detail> [Detail] </wsrm:Detail>
665       ...
665     </wsrm:SequenceFault>
665     <!-- Headers elided for clarity. -->
665   </S11:Header>
665   <S11:Body>
665     <S11:Fault>
665       <faultcode> [Code] </faultcode>
665       <faultstring> [Reason] </faultstring>
665     </S11:Fault>
665   </S11:Body>
665 </S11:Envelope>

```

665 The properties bind to a SOAP 1.1 fault as follows when the fault is generated as a result of processing a
666 <wsrm:CreateSequence> request message:

```

665 <S11:Envelope>
665   <S11:Body>
665     <S11:Fault>
665       <faultcode> [Subcode] </faultcode>
665       <faultstring> [Reason] </faultstring>
665     </S11:Fault>
665   </S11:Body>
665 </S11:Envelope>

```

665 4.1 SequenceFault Element

665 The purpose of the <wsrm:SequenceFault> element is to carry the specific details of a fault generated
666 during the reliable messaging specific processing of a message belonging to a Sequence. WS-
667 ReliableMessaging nodes MUST only use the <wsrm:SequenceFault> container in conjunction with the
668 SOAP 1.1 fault mechanism. WS-ReliableMessaging nodes MUST NOT use the the
669 <wsrm:SequenceFault> container in conjunction with the SOAP 1.2 binding.

670 The following exemplar defines its syntax:

```

670 <wsrm:SequenceFault ...>
670   <wsrm:FaultCode> wsrm:FaultCodes </wsrm:FaultCode>
670   <wsrm:Detail> ... </wsrm:Detail> ?
670   ...

```

670 `</wsrm:SequenceFault>`

671 The following describes the content model of the `SequenceFault` element.

672 `/wsrm:SequenceFault`

673 This is the element containing Sequence information for WS-ReliableMessaging

674 `/wsrm:SequenceFault/wsrm:FaultCode`

675 WS-ReliableMessaging nodes that generate a `<wsrm:SequenceFault>` MUST set the value of this
676 element to a qualified name from the set of fault [Subcodes] defined below. 

677 `/wsrm:SequenceFault/wsrm:Detail`

678 This optional element is intended for carrying application specific error information related to the fault
679 being described.

678 `/wsrm:SequenceFault/wsrm:Detail/{any}`

678 The application specific error information related to the fault being described.

678 `/wsrm:SequenceFault/wsrm:Detail/@{any}`

678 The application specific error information related to the fault being described.

678 `/wsrm:SequenceFault/{any}`

678 This is an extensibility mechanism to allow different (extensible) types of information, based on a schema,
679 to be passed.

678 `/wsrm:SequenceFault/@{any}`

678 This is an extensibility mechanism to allow additional attributes, based on schemas, to be added to the
679 element.

678 4.2 Sequence Terminated

678 This fault is generated by either the RM Source or the RM Destination to indicate that it has either
679 encountered an unrecoverable condition, or has detected a violation of the protocol and as a
680 consequence, has chosen to terminate the Sequence. The endpoint that generates this fault should make
681 every reasonable effort to notify the corresponding endpoint of this decision.

678 Receipt of `SequenceTerminated` by either the RMD or the RMS shall terminate the Sequence if it is not
679 otherwise terminated.

678 Properties:

678 [Code] Sender or Receiver

678 [Subcode] `wsrm:SequenceTerminated`

678 [Reason] The Sequence has been terminated due to an unrecoverable error.

678 [Detail]

678 `<wsrm:Identifier ...> xs:anyURI </wsrm:Identifier>`

678 **4.3 Unknown Sequence**

678 This fault is generated by either the RM Source or the RM Destination in response to a message
679 containing an unknown or terminated Sequence identifier. Receipt of UnknownSequence by either the
680 RMD or the RMS shall terminate the Sequence if it is not otherwise terminated.

681 Properties:

681 [Code] Sender

681 [Subcode] wsrn:UnknownSequence

681 [Reason] The value of wsrn:Identifier is not a known Sequence identifier.

681 [Detail]

```
681 <wsrn:Identifier ...> xs:anyURI </wsrn:Identifier>
```

681 **4.4 Invalid Acknowledgement**

681 This fault is generated by the RM Source in response to a <wsrn:SequenceAcknowledgement> that
682 violates the cumulative acknowledgement invariant. An example of such a violation would be a
683 SequenceAcknowledgement covering messages that have not been sent.

681 [Code] Sender

681 [Subcode] wsrn:InvalidAcknowledgement

681 [Reason] The SequenceAcknowledgement violates the cumulative acknowledgement invariant.

681 [Detail]

```
681 <wsrn:SequenceAcknowledgement ...> ... </wsrn:SequenceAcknowledgement>
```

681 **4.5 Message Number Rollover**

681 This fault is generated to indicate that message numbers for a Sequence have been exhausted.

681 Properties:

681 [Code] Sender

681 [Subcode] wsrn:MessageNumberRollover

681 [Reason] The maximum value for wsrn:MessageNumber has been exceeded.

681 [Detail]

```
681 <wsrn:Identifier ...> xs:anyURI </wsrn:Identifier>
```

681 **4.6 Create Sequence Refused**

681 This fault is generated in response to a create Sequence request that cannot be satisfied.

681 Properties:

681 [Code] Sender

681 [Subcode] wsrn:CreateSequenceRefused

681 [Reason] The create Sequence request has been refused by the RM Destination.

681 [Detail]

681 `xs:any`

681 **4.7 Sequence Closed**

681 This fault is generated by an RM Destination to indicate that the specified Sequence has been closed.

682 This fault MUST be generated when an RM Destination is asked to receive a message for a Sequence
683 that is closed.

681 Properties:

681 [Code] Sender

681 [Subcode] wsrn:SequenceClosed

681 [Reason] The Sequence is closed and can not receive new messages.

681 [Detail]

681 `<wsrm:Identifier...> xs:anyURI </wsrm:Identifier>`

681 **4.8 WSRM Required**

681 If an RM Destination requires the use of WS-RM, this fault is generated when it receives an incoming
682 message that did not use this protocol.

681 Properties:

681 [Code] Sender

681 [Subcode] wsrn:WSRMRequired

681 [Reason] The RM Destination requires the use of WSRM.

681 [Detail]

681 `xs:any`

681 5 Security Considerations

681 It is strongly recommended that the communication between services be secured using the mechanisms
682 described in WS-Security. In order to properly secure messages, the body and all relevant headers need
683 to be included in the signature. Specifically, the `<wsrm:Sequence>` header needs to be signed with the
684 body in order to "bind" the two together. The `<wsrm:SequenceAcknowledgement>` header may be
685 signed independently because a reply independent of the message is not a security concern.

681 Because Sequences are expected to exchange a number of messages, it is recommended that a security
682 context be established using the mechanisms described in WS-Trust[Trust] and WS-SecureConversation
683 [SecureConversation]. If a Sequence is bound to a specific destination, then the security context needs to
684 be established or shared with the destination servicing the Sequence. While the context can be
685 established at any time, it is critical that the messages establishing the Sequence be secured even if they
686 precede security context establishment. However, it is recommended that the security context be
687 established first. Security contexts are independent of reliable messaging Sequences. Consequently,
688 security contexts can come and go independent of the lifetime of the Sequence. In fact, it is
689 recommended that the lifetime of a security context be less than the lifetime of the Sequence unless the
690 Sequence is very short-lived.

681 It is common for message Sequences to exchange a number of messages (or a large amount of data). As
682 a result, the usage profile of a Sequence is such that it is susceptible to key attacks. For this reason it is
683 strongly recommended that the keys be changed frequently. This "re-keying" can be effected a number of
684 ways. The following list outlines four common techniques:

- 681 • Closing and re-establishing a security context
- 682 • Exchanging new secrets between the parties
- 683 • Using a derived key sequence and switch "generations"
- 684 • Attaching a nonce to each message and using it in a derived key function with the shared secret

685 The security context may be re-established using the mechanisms described in WS-Trust and WS-
686 SecureConversation. Similarly, secrets can be exchanged using the mechanisms described in WS-Trust.
687 Note, however, that the current shared secret should not be used to encrypt the new shared secret.
688 Derived keys, the preferred solution from this list, can be specified using the mechanisms described in
689 WS-SecureConversation.

685 There is a core tension between security and reliable messaging that can be problematic if not considered
686 in implementations. That is, one aspect of security is to prevent message replay and the core tenet of
687 reliable messaging is to replay messages until they are acknowledged. Consequently, if the security sub-
688 system processes a message but a failure occurs before the reliable messaging sub-system records the
689 message (or the message is considered "processed"), then it is possible (and likely) that the security sub-
690 system will treat subsequent copies as replays and discard them. At the same time, the reliable
691 messaging sub-system will likely continue to expect and even solicit the missing message(s). Care should
692 be taken to avoid and prevent this rare condition.

685 The following list summarizes common classes of attacks that apply to this protocol and identifies the
686 mechanism to prevent/mitigate the attacks:

- 685 • **Message alteration** – Alteration is prevented by including signatures of the message information
686 using WS-Security.
- 687 • **Message disclosure** – Confidentiality is preserved by encrypting sensitive data using WS-Security.

- 688 • **Key integrity** – Key integrity is maintained by using the strongest algorithms possible (by comparing
689 secured policies – see WS-Policy and WS-SecurityPolicy).
- 690 • **Authentication** – Authentication is established using the mechanisms described in WS-Security
691 and WS-Trust. Each message is authenticated using the mechanisms described in WS-Security.
- 692 • **Accountability** – Accountability is a function of the type of and string of the key and algorithms
693 being used. In many cases, a strong symmetric key provides sufficient accountability. However, in
694 some environments, strong PKI signatures are required.
- 695 • **Availability** – All reliable messaging services are subject to a variety of availability attacks. Replay
696 detection is a common attack and it is recommended that this be addressed by the mechanisms
697 described in WS-Security. (Note that because of legitimate message replays, detection should
698 include a differentiator besides message id such as a timestamp). Other attacks, such as network-
699 level denial of service attacks are harder to avoid and are outside the scope of this specification.
700 That said, care should be taken to ensure that minimal state is saved prior to any authenticating
701 Sequences.

702 B.2 Initial Transmission

702 The following example WS-ReliableMessaging headers illustrate the message exchange in the above
703 figure. The three messages have the following headers; the third message is identified as the last
704 message in the Sequence:

702 **Message 1**

```
702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">
702   <S:Header>
702     <wsa:MessageID>
702       http://Business456.com/guid/71e0654e-5ce8-477b-bb9d-34f05cfc9e
702     </wsa:MessageID>
702     <wsa:To>http://example.com/serviceB/123</wsa:To>
702     <wsa:From>
702       <wsa:Address>http://Business456.com/serviceA/789</wsa:Address>
702     </wsa:From>
702     <wsa:Action>http://example.com/serviceB/123/request</wsa:Action>
702     <wsmr:Sequence>
702       <wsmr:Identifier>http://Business456.com/RM/ABC</wsmr:Identifier>
702       <wsmr:MessageNumber>1</wsmr:MessageNumber>
702     </wsmr:Sequence>
702   </S:Header>
702   <S:Body>
702     <!-- Some Application Data -->
702   </S:Body>
702 </S:Envelope>
```

702 **Message 2**

```
702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">
702   <S:Header>
702     <wsa:MessageID>
702       http://Business456.com/guid/daa7d0b2-c8e0-476e-a9a4-d164154e38de
702     </wsa:MessageID>
702     <wsa:To>http://example.com/serviceB/123</wsa:To>
702     <wsa:From>
702       <wsa:Address>http://Business456.com/serviceA/789</wsa:Address>
702     </wsa:From>
702     <wsa:Action>http://example.com/serviceB/123/request</wsa:Action>
702     <wsmr:Sequence>
702       <wsmr:Identifier>http://Business456.com/RM/ABC</wsmr:Identifier>
702       <wsmr:MessageNumber>2</wsmr:MessageNumber>
702     </wsmr:Sequence>
702   </S:Header>
702   <S:Body>
702     <!-- Some Application Data -->
702   </S:Body>
702 </S:Envelope>
```

702 **Message 3**

```
702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsmr="http://docs.oasis-open.org/ws-rx/wsmr/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">
702   <S:Header>
702     <wsa:MessageID>
702       http://Business456.com/guid/0baaf88d-483b-4ecf-a6d8-a7c2eb546819
702     </wsa:MessageID>
702     <wsa:To>http://example.com/serviceB/123</wsa:To>
702     <wsa:From>
702       <wsa:Address>http://Business456.com/serviceA/789</wsa:Address>
```

```

702 </wsa:From>
702 <wsa:Action>http://example.com/serviceB/123/request</wsa:Action>
702 <wsrm:Sequence>
702 <wsrm:Identifier>http://Business456.com/RM/ABC</wsrm:Identifier>
702 <wsrm:MessageNumber>3</wsrm:MessageNumber>
702 </wsrm:Sequence>
702 <wsrm:AckRequested>
702 <wsrm:Identifier>http://Business456.com/RM/ABC</wsrm:Identifier>
702 </wsrm:AckRequested>
702 </S:Header>
702 <S:Body>
702 <!-- Some Application Data -->
702 </S:Body>
702 </S:Envelope>

```

702 B.3 First Acknowledgement

702 Message number 2 has not been received by the RM Destination due to some transmission error so it
703 responds with an acknowledgement for messages 1 and 3:

```

702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsrm="http://docs.oasis-open.org/ws-rx/wsrn/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">
702 <S:Header>
702 <wsa:MessageID>
702 http://example.com/guid/0baaf88d-483b-4ecf-a6d8-a7c2eb546810
702 </wsa:MessageID>
702 <wsa:To>http://Business456.com/serviceA/789</wsa:To>
702 <wsa:From>
702 <wsa:Address>http://example.com/serviceB/123</wsa:Address>
702 </wsa:From>
702 <wsa:Action>
702 http://docs.oasis-open.org/ws-rx/wsrn/200604/SequenceAcknowledgement
702 </wsa:Action>
702 <wsrm:SequenceAcknowledgement>
702 <wsrm:Identifier>http://Business456.com/RM/ABC</wsrm:Identifier>
702 <wsrm:AcknowledgementRange Upper="1" Lower="1"/>
702 <wsrm:AcknowledgementRange Upper="3" Lower="3"/>
702 </wsrm:SequenceAcknowledgement>
702 </S:Header>
702 <S:Body/>
702 </S:Envelope>

```

702 B.4 Retransmission

702 The RM Sourcediscovers that message number 2 was not received so it resends the message and
703 requests an acknowledgement:

```

702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsrm="http://docs.oasis-open.org/ws-rx/wsrn/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">
702 <S:Header>
702 <wsa:MessageID>
702 http://Business456.com/guid/daa7d0b2-c8e0-476e-a9a4-d164154e38de
702 </wsa:MessageID>
702 <wsa:To>http://example.com/serviceB/123</wsa:To>
702 <wsa:From>
702 <wsa:Address>http://Business456.com/serviceA/789</wsa:Address>
702 </wsa:From>

```

```

702 <wsa:Action>http://example.com/serviceB/123/request</wsa:Action>
702 <wsrm:Sequence>
702 <wsrm:Identifier>http://Business456.com/RM/ABC</wsrm:Identifier>
702 <wsrm:MessageNumber>2</wsrm:MessageNumber>
702 </wsrm:Sequence>
702 <wsrm:AckRequested>
702 <wsrm:Identifier>http://Business456.com/RM/ABC</wsrm:Identifier>
702 </wsrm:AckRequested>
702 </S:Header>
702 <S:Body>
702 <!-- Some Application Data -->
702 </S:Body>
702 </S:Envelope>

```

702 B.5 Termination

702 The RM Destination now responds with an acknowledgement for the complete Sequence which can then
703 be terminated:

```

702 <?xml version="1.0" encoding="UTF-8"?>
702 <S:Envelope xmlns:S="http://www.w3.org/2003/05/soap-envelope"
702 xmlns:wsrm="http://docs.oasis-open.org/ws-rx/wsrn/200604"
702 xmlns:wsa="http://www.w3.org/2005/08/addressing">

702 D. State Tables

702 This appendix specifies the non-normative state transition tables for RM Source and RM Destination.

702 Each cell in the tables in this appendix uses the following convention:

Legend
<i>action to take next state</i>

702 Table 2 RM Source State Transition Table

Events	States							
	None	Connecting	Connected	Rollover	Closing	Closed	Terminating	Terminated
Create Sequence	<i>Transmit Create Sequence</i> Connecting	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Create Sequence Response	N/A	Connected	N/A	N/A	N/A	N/A	N/A	N/A
Create Sequence Refused Fault	N/A	Terminated	N/A	N/A	N/A	N/A	N/A	N/A
New Message	N/A	N/A	<i>Transmit message</i> Connected	<i>Inhibited</i>	<i>Inhibited?</i> Closing	N/A	N/A	N/A
Retransmit of unack message	N/A	N/A	<i>Transmit message</i> Connected	<i>Transmit message</i> Rollover	<i>Trasmit message?</i> Closing	<i>Transmit message</i> Closed	N/A	N/A
SeqAck (non-final)	N/A	N/A	Connected	Rollover	Closing	Closed	<i>Ignore?</i>	<i>Transmit Unknown Sequence Fault</i> Terminated
Nack	N/A	N/A	<i>Transmit message</i> Connected	<i>Transmit message</i> Rollover	<i>Transmit message?</i> Closing	<i>Transmit message?</i> Closed	<i>Ignore?</i>	<i>Transmit Unknown Sequence fault</i> Terminated
Reached max msg number	N/A	N/A	Rollover	Rollover	N/A	N/A	N/A	N/A

Events	States							
	None	Connecting	Connected	Rollover	Closing	Closed	Terminating	Terminated
Create Sequence	<i>Transmit Create Sequence</i> Connecting	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Message Number Rollover Fault	N/A	N/A	Rollover	Rollover	N/A	Closed?	<i>Ignore?</i>	<i>Transmit Unknown Sequence Fault</i> Terminated
Close Sequence	N/A	N/A	<i>Transmit Close Sequence</i> Closing	<i>Transmit Close Sequence</i> Closing	<i>Transmit Close Sequence</i> Closing	<i>Transmit Close Sequence</i> Closed	N/A?	N/A
Close Sequence Response	N/A	N/A	N/A	N/A	Closed	Closed	<i>Ignore?</i>	<i>Transmit Unknown Sequence Fault</i> Terminated
SeqAck (final)	N/A	N/A	Closed?	Closed?	Closed?	Closed?	<i>Ignore?</i>	<i>Transmit Unknown Sequence fault</i> Terminated
Sequence Closed Fault	N/A	N/A	?	?	?	?	<i>Ignore?</i>	<i>Transmit Unknown Sequence Fault</i> Terminated
Unknown Sequence Fault	N/A	N/A	Terminated	Terminated	Terminated	Terminated	Terminated	<i>Ignore</i> Terminated
Sequence Terminated Fault	N/A	Terminated	Terminated	Terminated	Terminated	Terminated	Terminated	<i>Ignored</i> Terminated
Terminate Sequence	N/A	N/A	<i>Transmit Terminate Sequence</i> Terminating	N/A				
Terminate Sequence Response	N/A	N/A	N/A	N/A	N/A	N/A	Terminated	Terminated
Elapse Expires duration	N/A	N/A	Terminated	Terminated	Terminated	Terminated	Terminated?	N/A

702 In Table 2 above, the rows consists of events that occur at the RM Source throughout the lifetime of an
703 RM Sequence and the columns consists of various RM Source states. Each cell in the table above lists
704 the action that the RM Source takes on occurrence of a particular event and the next state that it
705 transitions.

702 Table 3 RM Destination State Transition Table

Events	States						
	None	Connecting	Connected	Rollover	Rollover Closed	Closed	Terminated
Creation request not satisfied	N/A	<i>Send Create Sequence Refused Fault</i> Terminated	N/A	N/A	N/A	N/A	
Unrecoverable error on creation	N/A	<i>Send Sequence Terminated Fault?</i> Terminated	N/A	N/A	N/A	N/A	
New message	N/A	N/A	<i>Send SequenceAck</i> Connection	<i>Send Message Number Rollover Fault</i> Rollover	<i>Send Message Number Rollover or Sequence Closed Fault?(with SeqAck+Final)</i> Rollover Closed	<i>Send Sequence Closed Fault (with SeqAck+Final)</i> Closed	<i>Send Unknown Seq Fault?</i> Terminated
Retransmitted message	N/A	N/A	<i>Send SequenceAck</i> Connected	<i>Send SequenceAck</i> Rollover	<i>Send SeqAck+Final</i> Rollover Closed	<i>Send SeqAck+Final</i> Closed	<i>Send Unknown Seq Fault</i> Terminated
Ack requested	N/A	N/A	<i>Send SequenceAck</i> Connected	<i>Send SequenceAck</i> Rollover	<i>Send SeqAck+Final</i> Rollover Closed	<i>Send SeqAck+Final</i> Closed	<i>Send Unknown Seq Fault</i> Terminated
Reach max message number	N/A	N/A	Rollover	Rollover	Rollover Closed	N/A	N/A
Message Number Rollover Fault	N/A	N/A	Rollover	Rollover	Rollover Closed	Closed?	<i>Send Unknown Sequence Fault</i> Terminated
Close Sequence	N/A	N/A	<i>Send CloseSequen</i>	<i>Send CloseSequen</i>	<i>Send Close Sequence</i>	<i>Send Close Sequence</i>	<i>Send Unknown</i>

Events	States						
	None	Connecting	Connected	Rollover	Rollover Closed	Closed	Terminated
			<i>ceResponse with SequenceAck (Final)</i> Close	<i>ceResponse with SequenceAck Final</i> Rollver Closed	<i>Response with SeqAck+Final</i> Rollover Closed	<i>Response with SeqAck+Final</i> Closed	<i>Sequence Fault</i> Terminated
Close Sequence itself	N/A	N/A	Closed	Rollover Closed	Rollover Closed	Closed	N/A
Terminate Sequence	N/A	N/A	Terminated	Terminated	Terminated	Terminated	Terminated
Unknown Sequence Fault	N/A	N/A	Terminated	Terminated	Terminated	Terminated	<i>Ignore</i> Terminated
Sequence Terminated Fault	N/A	N/A	Terminated	Terminated	Terminated	Terminated	<i>Ignore</i> Terminated
Terminate Sequence	N/A	N/A	Terminated	Terminated	Terminated	Terminated	N/A
Elapse Expires duration	N/A	N/A	Terminated	Terminated	Terminated	Terminated	N/A

702 In Table 3 above, the rows consists of events that occur at the RM Destination throughout the lifetime of
703 an RM Sequence and the columns consists of various RM Destination states. Each cell in the table above
704 lists the action that the RM Destination takes on occurrence of a particular event and the next state that it
705 transitions.

706 E. Acknowledgments

707 This document is based on initial contribution to OASIS WS-RX Technical Committee by the following
708 authors:

709 Ruslan Bilorusets, BEA, Don Box, Microsoft, Luis Felipe Cabrera, Microsoft, Doug Davis, IBM,
710 Donald Ferguson, IBM, Christopher Ferris, IBM (Editor), Tom Freund, IBM, Mary Ann Hondo,
711 IBM, John Ibbotson, IBM, Lei Jin, BEA, Chris Kaler, Microsoft, David Langworthy, Microsoft
712 (Editor), Amelia Lewis, TIBCO Software, Rodney Limprecht, Microsoft, Steve Lucco, Microsoft,
713 Don Mullen, TIBCO Software, Anthony Nadalin, IBM, Mark Nottingham, BEA, David Orchard,
714 BEA, Jamie Roots, IBM, Shivajee Samdarshi, TIBCO Software, John Shewchuk, Microsoft, Tony
715 Storey, IBM.

716 The following individuals have provided invaluable input into the initial contribution:

717 Keith Ballinger, Microsoft, Stefan Batres, Microsoft, Allen Brown, Microsoft, Michael Conner, IBM,
718 George Copeland, Microsoft, Francisco Curbera, IBM, Paul Fremantle, IBM, Steve Graham, IBM,
719 Pat Helland, Microsoft, Rick Hill, Microsoft, Scott Hinkelman, IBM, Tim Holloway, IBM, Efim Hudis,
720 Microsoft, Gopal Kakivaya, Microsoft, Johannes Klein, Microsoft, Frank Leymann, IBM, Martin
721 Nally, IBM, Peter Niblett, IBM, Jeffrey Schlimmer, Microsoft, James Snell, IBM, Keith Stobie,
722 Microsoft, Satish Thatte, Microsoft, Stephen Todd, IBM, Sanjiva Weerawarana, IBM, Roger
723 Wolter, Microsoft.

724 The following individuals were members of the committee during the development of this specification:

725 *TBD*

F. Revision History

Rev	Date	By Whom	What
wd-01	2005-07-07	Christopher Ferris	Initial version created based on submission by the authors.
ws-02	2005-07-21	Doug Davis	I011 (PT0S) added
wd-02	2005-08-16	Anish Karmarkar	Trivial editorial changes
ws-03	2005-09-15	Doug Davis	I019 and i028 (CloseSeq) added
wd-05	2005-09-26	Gilbert Pilz	i005 (Source resend of nacks messages when ack already received) added.
wd-05	2005-09-27	Doug Davis	i027 (InOrder delivery assurance spanning multiple sequences) added
wd-05	2005-09-27	Doug Davis	i020 (Semantics of "At most once" Delivery Assurance) added
wd-05	2005-09-27	Doug Davis	i034 (Fault while processing a piggy-backed RM header) added
wd-05	2005-09-27	Doug Davis	i033 (Processing model of NACKs) added
wd-05	2005-09-27	Doug Davis	i031 (AckRequested schema inconsistency) added
wd-05	2005-09-27	Doug Davis	i025 (SeqAck/None) added
wd-05	2005-09-27	Doug Davis	i029 (Remove dependency on WS-Security) added
wd-05	2005-09-27	Doug Davis	i039 (What does 'have a mU attribute' mean) added
wd-05	2005-09-27	Doug Davis	i040 (Change 'optiona'/'required' to 'OPTIONAL'/'REQUIRED') added
wd-05	2005-09-30	Anish Karmarkar	i017 (Change NS to http://docs.oasis-open.org/wsrn/200510/)
wd-05	2005-09-30	Anish Karmarkar	i045 (Include SecureConversation as a reference and move it to non-normative citation)
wd-05	2005-09-30	Anish Karmarkar	i046 (change the type of wsrn:FaultCode element)
wd-06	2005-11-02	Gilbert Pilz	Start wd-06 by changing title page from cd-01.
wd-06	2005-11-03	Gilbert Pilz	i047 (Reorder spec sections)
wd-07	2005-11-17	Gilbert Pilz	Start wd-07
wd-07	2005-11-28	Doug Davis	i071 – except for period in Appendix headings
wd-07	2005-11-28	Doug Davis	i10
wd-07	2005-11-28	Doug Davis	i030
wd-07	2005-11-28	Doug Davis	i037
wd-07	2005-11-28	Doug Davis	i038
wd-07	2005-11-28	Doug Davis	i041
wd-07	2005-11-28	Doug Davis	i043
wd-07	2005-11-28	Doug Davis	i044

Rev	Date	By Whom	What
wd-07	2005-11-28	Doug Davis	i048
wd-07	2005-11-28	Doug Davis	i051
wd-07	2005-11-28	Doug Davis	i053
wd-07	2005-11-28	Doug Davis	i059
wd-07	2005-11-28	Doug Davis	i062
wd-07	2005-11-28	Doug Davis	i063
wd-07	2005-11-28	Doug Davis	i065
wd-07	2005-11-28	Doug Davis	i067
wd-07	2005-11-28	Doug Davis	i068
wd-07	2005-11-28	Doug Davis	i069
wd-07	2005-11-28	Doug Davis	Fix bulleted list (#2) in section 2.3
wd-07	2005-11-29	Gilbert Pilz	i074 (Use of [tcShortName] in artifact locations namespaces, etc)
wd-07	2005-11-29	Gilbert Pilz	i071 – Fixed styles and formatting for TOC. Fixed styles of the appendix headings.
wd-07	2005-11-30	Doug Davis	Removed dup definition of "Receive"
wd-07	2005-11-30	Gilbert Pilz	Fixed lost formatting from heading for Namespace section. Fixed style of text body elements to match OASIS example documents. Fixed tables to match OASIS example documents.
wd-07	2005-12-01	Gilbert Pilz	Updated fix for i074 to eliminate trailing '/'. Added corresponding text around action IRI composition.
wd-07	2005-12-01	Gilbert Pilz	Use non-fixed fields for date values on both title page and body footers.
wd-07	2005-12-01	Doug Davis	Alphabetize the glossary
wd-07	2005-12-02	Doug Davis	i064
wd-07	2005-12-02	Doug Davis	i066
wd-08	2005-12-15	Doug Davis	Add back in RM Source to glossary
wd-08	2005-12-15	Steve Winkler	Doug added Steve's editorial nits
wd-08	2005-12-21	Doug Davis	i050
wd-08	2005-12-21	Doug Davis	i081
wd-08	2005-12-21	Doug Davis	i080 – but i050 negates the need for any changes
wd-08	2005-12-21	Doug Davis	i079
wd-08	2005-12-21	Doug Davis	i076 – didn't add text about "replies" since the RMD to RMS sequence could be used for any message not just replies
wd-08	2005-12-21	Umit Yalcinalp	Action Su03: removed wsse from Table 1
wd-08	2005-12-21	Umit Yalcinalp	i057 per Sunnyvale F2F 2005, Cleaned up some formatting errors in contributors
wd-08	2005-12-27	Doug Davis	i060
wd-08	2005-12-27	Gilbert Pilz	Moved schema and WSDL files to their own artifacts. Converted source document to

Rev	Date	By Whom	What
			OpenDocument Text format. Changed line numbers to be a single style.
wd-08	2005-12-28	Anish Karmarkar	Included a section link to c:\temp\wsrm-1.1-schema-200510.xsd and to c:\temp\wsrm-1.1-wsdl-200510.wsdl
wd-08	2006-01-04	Gilbert Pilz	Fixed formatting for included sections.
wd-08	2006-01-05	Gilbert Pilz	Created links for unused references. Fixed exemplars for CloseSequence and CloseSequenceResponse.
wd-09	2006-01-11	Doug Davis	Minor tweaks to text/typos.
wd-10	2006-01-23	Doug Davis	Accept all changes from wd-09 Make some minor editorial tweaks from Marc's comments.
wd-10	2006-02-14	Doug Davis	Issue 082 resolution
wd-10	2006-02-14	Doug Davis	Issue 083 resolution
wd-10	2006-02-14	Doug Davis	Issue 085 resolution
wd-10	2006-02-14	Doug Davis	Issues 086, 087 resolutions Defined MessageNumberType
wd-10	2006-02-15	Doug Davis	Issue 078 resolution
wd-10	2006-02-15	Doug Davis	Issue 094 resolution
wd-10	2006-02-15	Doug Davis	Issue 095 resolution
wd-10	2006-02-15	Gilbert Pilz	Issue 088 – added namespace URI link to namespace URI; added text explaining that this URI could be dereferenced to produce the RDDDL doc; added non-normative reference to RDDDL 2.0
wd-10	2006-02-17	Anish Karmarkar	Namespace changed to 200602 for both WSDL and XSD docs.
wd-10	2006-02-17	Anish Karmarkar	Issue i087 as it applies to WSRM spec.
wd-10	2006-02-17	Anish Karmarkar	Added titles and minor text for state table (issue i058).
wd-11	2006-02-22	Doug Davis	Accept all changes for new WD Minor typos fixed
wd-11	2006-02-23	Doug Davis	s'/close'/close/g – per Marc Goodner Added first ref to [URI] – per Marc G again
wd-11	2006-02-27	Doug Davis	Issue i061 applied
wd-11	2006-02-28	Doug Davis	Fixed typo around the use of "above" and "below"
wd-11	2006-03-01	Doug Davis	Minor typos found by Marc Goodner
wd-11	2006-03-02	Doug Davis	Minor typos found by Matt Lovett
wd-11	2006-03-08	Doug Davis	Issue 091 applied
wd-11	2006-03-08	Doug Davis	Issue 092 applied
wd-11	2006-03-08	Doug Davis	Issue 100 applied

Rev	Date	By Whom	What
wd-12	2006-03-20	Doug Davis	Added space in "SOAP1.x" – PaulCotton
wd-12	2006-04-11	Doug Davis	Issue 007 applied
wd-12	2006-04-11	Doug Davis	Issue 090 applied
wd-12	2006-04-11	Doug Davis	Issue 098 applied
wd-12	2006-04-11	Doug Davis	Issue 099 applied
wd-12	2006-04-11	Doug Davis	Issue 101 applied
wd-12	2006-04-11	Doug Davis	Issue 103 applied
wd-12	2006-04-11	Doug Davis	Issue 104 applied
wd-12	2006-04-11	Doug Davis	Issue 105 applied
wd-12	2006-04-11	Doug Davis	Issue 107 applied
wd-12	2006-04-11	Doug Davis	Issue 109 applied
wd-12	2006-04-11	Doug Davis	Issue 110 applied
wd-12	2006-04-12	Doug Davis	Used "generated" instead of "issue" or "send" when talking about faults.
wd-12	2006-04-24	Gilbert Pilz	Update references to WS-Addressing to the Proposed Recommendations; update WS-RM namespace to "200604".
wd-13	2006-05-08	Gilbert Pilz	i093 part 1; more work needed

727 G. Notices

728 OASIS takes no position regarding the validity or scope of any intellectual property or other rights that
729 might be claimed to pertain to the implementation or use of the technology described in this document or
730 the extent to which any license under such rights might or might not be available; neither does it represent
731 that it has made any effort to identify any such rights. Information on OASIS's procedures with respect to
732 rights in OASIS specifications can be found at the OASIS website. Copies of claims of rights made
733 available for publication and any assurances of licenses to be made available, or the result of an attempt
734 made to obtain a general license or permission for the use of such proprietary rights by implementors or
735 users of this specification, can be obtained from the OASIS Executive Director.

736 OASIS invites any interested party to bring to its attention any copyrights, patents or patent applications, or
737 other proprietary rights which may cover technology that may be required to implement this specification.
738 Please address the information to the OASIS Executive Director.
