

With XpressRules™ *you* control security policies!

Best-of-Breed Solution:

- Meets NCES requirements for Attribute-Based Access Control (ABAC)*
- Zero programming: automatically generates XACML access policies of any complexity from near-natural language (NNL) input
- Pre-emptive audit (easier certification): reverse-compiles XACML to expose original NNL to auditor/certificator
- Easy procurement: An Air Force SBIR-developed product, XpressRules for Access is available for sole-source (non-compete) acquisition.

* A graphical user interface (GUI) policy tool shall be created that provides the ability to introduce and manage attribute-based policies for service access control
